ACKNOWLEDGEMENT

First of all, writer expresses her gratitude to God, who strengthen and bless the writer during the final project so that the thesis can be finished. This thesis was performed as one of requirement to obtain the degree in Sarjana Teknologi Pertanian Strata Satu. The title of the thesis is The Effect of Milk Ratio and Skim Milk Powder Concentration on The Characteristics of Milk-Soy Yoghurt. The writer also expresses her appreciation for all prayer, support, and guidance which strengthen and encourage the writer during the completion of final project. The writer realizes that she could not succeed without the help and support from all. Therefore, the writer sincerely thanks all parties which participate during the completion of the final project, who are:

1. Ir. W. Donald R. Pokatong, M.Sc., Ph.D. as the final project supervisor who gave a lot of guidance, courage, and advice to the writer during the preparation and completion of this thesis.

2. Julia Ratna Wijaya, MAppSc. as co-supervisor who gave a lot of support and guidance during the completion of this thesis.

3. Nuri Arum Anugrahati, S.Si, MP as Head of Food Technology Department.

4. My father Januar Muliadi, my mother Djuwita Merrywati Sutanto, my sister Jennifer, my Grandmother Lanny and my cousin Angel who always support and encourage the writer during the completion of the thesis.

5. Dr. Adolf P. as head of Microbiology Lab, Merry D.T., MSi as head of Quality Control Lab, and Jeremia Manuel, MP as head of Food Processing Technology Lab, who have given permission to use the lab for research.
6. Mr. Yosafat, Mr. Rudy, Mr. Ade, Mr. Hendra, and Mr. Donny as the laborant, Mr. Anton, Ms. Putri, and all members of Food Technology Department who helped the writer during the completion of final project.

7. Ci Nisia, Dyana, Joan Adera, and Mikhael Dominico who have given a lot of help and support during the accomplishment of this final project.

8. Beloved Classmates of C Class 2007 who give help and support to each other during the completion of this final project.

9. All friends who had worked, shared problems, suggestions, and nerves in the lab, especially Cherisa, Cindy, Sari, Adel, Charissa, Jovian, Michael, Novel, Stephen, Liony, and others who cannot be mentioned one by one.

10. Beloved best friends, Sandra, Steffi, Vina, Jane, Ovi, Amanda, Nana, Cella, Melissa, Dian, Stephanie, Karin, Tarina, and Regina, for the endless support and motivation during completion of this thesis.

11. All parties whose name could not be mentioned one by one, who has helped the writer during the completion of final project.

The writer realized that this report is not perfect; therefore, the writer apologized if there are any mistakes in writing this thesis. Therefore, suggestions and critics will be useful for better work in the future. Hopefully, this thesis will give useful information to those who read it.

Karawaci, March 2011

ABSTRACT .................................................................................................. vi
ACKNOWLEDGEMENT ............................................................................ vii
TABLE OF CONTENT ................................................................................ ix
LIST OF TABLES ........................................................................................ xii
LIST OF FIGURES ...................................................................................... xiii
LIST OF APPENDICES ............................................................................... xix

CHAPTER I INTRODUCTION
1.1 Background ........................................................................................... 1
1.2 Research Problems ................................................................................ 2
1.3 Objectives ............................................................................................. 3
  1.3.1 General Objectives ........................................................................ 3
  1.3.2 Specific Objectives ......................................................................... 3

CHAPTER II LITERATURE REVIEW
2.1 Milk ...................................................................................................... 4
  2.1.1 Chemical Composition of Milk .................................................... 4
    2.1.1.1 Water ..................................................................................... 5
    2.1.1.2 Fat ......................................................................................... 5
    2.1.1.3 Protein ................................................................................... 6
    2.1.1.4 Carbohydrates ........................................................................ 7
    2.1.1.5 Minerals ................................................................................ 8
    2.1.1.6 Vitamins ................................................................................ 9
  2.1.2 Physical Characteristics of Milk .................................................... 10
2.2 Soymilk ................................................................................................ 11
2.3 Yoghurt ............................................................................................... 14
CHAPTER III RESEARCH METHODOLOGY
3.1 Materials and Equipment ............................................. 22
3.2 Preliminary Research ..................................................... 23
  3.2.1 Soymilk Production ................................................... 23
  3.2.2 Proximate Analyses ............................................... 24
  3.2.3 Determination of the Optimum Sugar Concentration ........ 24
  3.2.1.1 Yoghurt/Soyghurt Production (with a constant level of SMP) ... 25
3.3 Main Research ............................................................... 26
  3.3.1 Yoghurt/Soyghurt Production (with a constant level of sugar) .... 27
3.4 Experimental Design ...................................................... 29
  3.4.1 Preliminary Research ............................................. 29
  3.4.2 Main Research ..................................................... 30

CHAPTER IV RESULTS AND DISCUSSION
4.1 Preliminary Research .................................................... 33
  4.1.1 Chemical Composition of Milk and Soymilk .................. 33
  4.1.2 Effect of Milk-Soymilk Ratio and Sugar Addition ............ 35
    4.1.2.1 Total Titratable Acidity ............................................. 35
    4.1.2.2 pH ...................................................................... 37
    4.1.2.3 Total Soluble Solid (TSS) ......................................... 39
    4.1.2.4 Total Plate Count (TPC) .......................................... 41
    4.1.2.5 Viscosity ............................................................ 43
4.1.2.6 Optimum Sugar Concentration.................................................. 44
4.2 Main Research....................................................................................... 45
4.2.1 Chemical Composition................................................................. 45
4.2.1.1 Moisture Content ...................................................................... 45
4.2.1.2 Protein Content ......................................................................... 47
4.2.1.3 Fat Content ............................................................................... 49
4.2.1.4 Carbohydrate Content ............................................................... 50
4.2.1.5 Ash Content .............................................................................. 52
4.2.1.6 Calcium Content ....................................................................... 54
4.2.2 Total Titratable Acidity..................................................................... 55
4.2.3 pH ................................................................................................... 57
4.2.4 Total Soluble Solid .......................................................................... 59
4.2.5 Total Plate Count ............................................................................ 60
4.2.6 Viscosity ......................................................................................... 62
4.2.7 Organoleptic Analysis ..................................................................... 63
4.2.7.1 Color ........................................................................................ 64
4.2.7.2 Acid Taste ................................................................................ 65
4.2.7.3 Off-Flavor/Odor ....................................................................... 67
4.2.7.4 Viscosity................................................................................... 68
4.2.7.1 Overall Acceptance ................................................................... 69
4.2.8 Determination of the Best Formulation ............................................ 70

CHAPTER V CONCLUSIONS AND SUGGESTIONS
5.1 Conclusions ........................................................................................... 72
5.2 Suggestions ........................................................................................... 73
