ACKNOWLEDGEMENTS

It is never grateful enough to thank God for giving His blessings to the writer during the research being carried out and completion of this thesis in a very fine way. This thesis reported all information regarding the research entitled “STUDY OF ANTIOXIDANT CHARACTERISTICS OF CIDER PREPARED FROM POMEGRANATE (PUNICA GRANATUM L.) FRUIT PEELS” during the past four months in the laboratories.

My acknowledgments are extended to the following individuals for the help, support, and love, without whom collecting materials and completing this thesis would not be possible:

1) Mr. Ir. W. Donald R. Pokatong, M.Sc., Ph.D. as the supervisor for all of the time, patience, guidance, and advice given during the research up to the completion of this thesis.

2) Ms. Julia Ratna Wijaya, MAppSc. as the co-supervisor for the guidance and support given during the research until the completion of this thesis.

3) Ms. Nuri Arum Anugrahati, MP as the Head of Food Technology Department Universitas Pelita Harapan for the guidance given during the research, seminar, and until the completion of this thesis.

4) Ms. Natania, Ms. Ratna Handayani, Mr. Adolf Parhusip, Ms. Sisi Patricia, and Mr. Jeremia Manuel as Heads of Chemistry, Research, Microbiology, Food Processing, and Quality Control Laboratories for the patience and guidance given during the research.
5) Mr. Adzie, Mr. Darius, Mr. Yosafat, Mr. Hendra, and Mr. Donny as the laborants of Chemistry, Microbiology, Quality Control, and Food Processing Laboratories whom were willing to help the writer during the research in the laboratories.

6) Lovely father (Warris Pang), mother (Tan Dju Kie), brothers (Aan Parwiro and Kahar Pangestu), and sister (Shinta Pangesti) for the endless love and support for writer in finishing this research and thesis.

7) Dear Benardo for the endless support, help, and patience during the research until the completion of this thesis.

8) Nalini Purnaningtyas, Lauralia Bernetta, Jessica Ignacia, Meiliana Lukman, and Laura Herbani as the fellow friends under the supervision of Mr. Donald for supporting each other until this time.

9) Victoria Budiman, Adrian Bayu, Isaura Petrina Tjahja, and Christina Tjhin for the support and help during the research carried out in the laboratories.

10) All staff of FTI UPH and friends for the support and help during the research.

11) All people who have given a big contribution in finishing this thesis whom cannot be mentioned one by one.

The writer realizes that this report is not perfect, thus criticism and suggestion are welcome. Hopefully, it will give useful information for pertinent readers.

Karawaci, July 2012

Writer

CHAPTER I INTRODUCTION  
1.1 Background........................................................................................................................1  
1.2 Research Problem..............................................................................................................3  
1.3 Objectives ........................................................................................................................3  
  1.3.1 General Objectives........................................................................................................3  
  1.3.2 Specific Objectives.........................................................................................................4  

CHAPTER II LITERATURE REVIEW  
2.1 Pomegranate.......................................................................................................................5  
2.2 Antioxidant ........................................................................................................................7  
  2.2.1 Bioactive Compounds in Pomegranate........................................................................9  
2.3 Blanching..........................................................................................................................10  
2.4 Yeast Fermentation..........................................................................................................13  
2.5 Cider.................................................................................................................................16  

CHAPTER III RESEARCH METHODOLOGY  
3.1 Materials and Equipment...............................................................................................19
3.2 Research Stages ...............................................................................................19
  3.2.1 Research Stage I ......................................................................................20
  3.2.2 Research Stage II ....................................................................................21
3.3 Experimental Design .......................................................................................23
  3.3.1 Research Stage I ......................................................................................23
  3.3.2 Research Stage II ....................................................................................25
3.4 Procedures of Analyses ....................................................................................28
  3.4.1 Determination of Moisture Content by Oven Method .........................28
  3.4.2 Determination of Total Phenolic Content by Folin-Ciocalteu Method ....................................................................................................28
  3.4.3 Determination of Total Flavonoid Content by AlCl₃ Colorimetric Method ....................................................................................................29
  3.4.4 Determination of Total Antioxidant Activity by DPPH Assay ..............29
  3.4.5 Phytochemical Test .................................................................................29
  3.4.6 Determination of Alcohol Content ..........................................................31
  3.4.7 Determination of Reducing Sugar Content .............................................32
  3.4.8 Determination of Total Dissolved Solids .................................................34
  3.4.9 Measurement of pH .................................................................................34
  3.4.10 Determination of Total Titratable Acidity .............................................34

CHAPTER IV RESULTS AND DISCUSSION
4.1 Antioxidant Characteristics of Pomegranate Fruit-peel Juices ....................36
  4.1.1 Total Phenolic Content of Pomegranate Fruit-peel Juices .................37
  4.1.2 Total Flavonoid Content of Pomegranate Fruit-peel Juices ..............39
  4.1.3 Antioxidant Activity (IC₅₀) of Pomegranate Fruit-peel Juices ............41
  4.1.4 Pomegranate Fruit-peel Juice with the Best Antioxidant Activity .........43
4.2 Pomegranate Fruit-peel Prepared Ciders .........................................................43
  4.2.1 Physicochemical Characteristics of Prepared Cider .............................45
  4.2.2 Antioxidant Characteristics of Prepared Cider ......................................51
  4.2.3 Pomegranate Fruit-peel Cider with the Best Antioxidant Activity .......55
CHAPTER V CONCLUSIONS AND SUGGESTIONS

5.1 Conclusions ........................................................................................................57
5.2 Suggestions ........................................................................................................58

BIBLIOGRAPHY ..................................................................................................59
APPENDICES .....................................................................................................65
LIST OF FIGURES

Figure 2.1 Pomegranate tree (a) and its fruit (b).............................................................. 6
Figure 2.2 Glycolysis and alcoholic fermentation pathways in yeast......................... 15
Figure 2.3 A flowchart of general cider making......................................................... 17
Figure 3.1 A flowchart of preparation of steam-blanched, water-blanched, and unblanched pomegranate fruit-peel juices ....................................................... 21
Figure 3.2 A flowchart of pomegranate fruit-peel cider preparation.............................. 23
Figure 4.1 Pomegranate fruit-peel juices prepared from pomegranate fruit peels treated with different blanching methods and time............................... 37
Figure 4.2 Pomegranate fruit-peel ciders prepared from different methods in cider making and fermentation time (day-3) ......................................................... 44
Figure 4.3 pH of pomegranate fruit-peel cider observed during fermentation.......................... 47
LIST OF TABLES

Table 2.1 Classification of pomegranate ............................................................. 6
Table 2.2 Nutrition value of pomegranate fruit per 100 g of edible portion .......... 7
Table 3.1 Density of water at various temperatures (°C)................................. 32
Table 3.2 Weight of glucose based on the Luff Schrool method..................... 33
