ACKNOWLEDGEMENTS

Greatest gratitude to Jesus Christ for His continuous blessings, guidance, and favors to the writer during the completion of this thesis, which is a part of the academic requirements to obtain a degree of Sarjana Teknologi Pertanian Strata Satu in Food Technology Department, Faculty of Industrial Technology, Universitas Pelita Harapan.

The writer realizes that it is also because of the supports from many people that the completion of this thesis can be achieved. Writer feels truly thankful and in this opportunity would like to express a sincere gratitude to:

1. Mr. W. Donald, R. Pokatong, Ph.D. as the thesis supervisor, for his time, guidance, support, and advices as well as numerous problem-solving ideas.

2. Mrs. Sisi Patricia, MEng as the thesis co-supervisor and the head of Food Processing Laboratory, for her patience, care, and never-ending support.

3. Mrs. Nuri Arum Anugrahati, MP as the Head of Food Technology Department in Universitas Pelita Harapan for giving the opportunity to complete this thesis and also for her encouragements.

4. Ms. Julia Ratna Wijaya, MAppSc, as the Vice Head of Food Technology Department in Universitas Pelita Harapan also for giving the chance to complete this thesis and for her enormous support and attention.

5. Writer's family members, Ferdinand B. Poerwoko and Linda W. Rahadian, Her Rahadian and Poppy Widjaja, Basoeki Dojosrisanto, Yosa Gautama, Lauretta Bernadine, Lawrence Bernard, Erika Song, Luke Benedict, Josh, Jeff, Joey, and all the Rahadian’s, for their endless prayers, support, and affection.
6. Ms. Ratna Handayani, Mr. Jeremia Manuel Halim, Mr. Adolf Parhusip, and Mrs. Natania as Head of Research, Quality Control, Microbiology, and Chemistry Laboratory for allowing writer to use the laboratories.

7. All lecturers and staff in Universitas Pelita Harapan and Newcastle University, for sharing knowledge and giving supports to writer.

8. Mr. Donny, Mr. Hendra, Mr. Rudi, Mr. Yosafat, Mr. Darius, Mr. Adji, and Mr. Junaedi, as laboratory assistants for the time, help, and support.

9. Benardo Huang, Jessica Ignacia, Laura Herbani, Meiliana Lukman, Nalini Purnaningtyas, and Silven Parlina, for their togetherness as Pokatong army.

11. Writer’s church colleagues for their prayers and encouragements.

12. The sensory panels for the research for their time in conducting the test.

13. All who are not mentioned but have given contribution to writer during the research and thesis report writing.

Writer realizes that nothing is perfect and so is this thesis report far from perfect and would like to apologize for any mistakes presence. Writer appreciates suggestions and criticism upon this report and hopes that this report will give useful information for readers and further development in Food Technology.

Karawaci,

Writer

## CHAPTER I INTRODUCTION

1.1 Background .........................................................1
1.2 Research Problem..................................................2
1.3 Objectives ............................................................3
   1.3.1 General Objective ...........................................3
   1.3.2 Specific Objectives .........................................3

## CHAPTER II LITERATURE REVIEW

2.1 Banana ........................................................................4
   2.1.1 Banana Peel ....................................................6
2.2 Flour Production ....................................................7
   2.2.1 Drying of Fruit ...............................................7
2.3 Dietary Fiber ........................................................8
2.4 Cookies .......................................................................9
   2.4.1 Ingredients ......................................................10
   2.4.2 Processing .......................................................12
2.5 Gelatinization .........................................................14
2.6 Gluten-free Products and Celiac Disease ......................16

viii
CHAPTER III MATERIALS AND EQUIPMENT

3.1 Materials and Equipment ................................................................. 18
3.2 Research Stages ............................................................................... 19
  3.2.1 Research Stage I ................................................................. 19
  3.2.2 Research Stage II ............................................................. 21
3.3 Experimental Design...................................................................... 24
  3.3.1 Research Stage I ................................................................. 24
  3.3.2 Research Stage II ............................................................. 26
3.4 Analysis Procedures ...................................................................... 28
  3.4.1 Moisture Content (AOAC, 2005) ............................................ 28
  3.4.2 Yield (%) ............................................................................. 28
  3.4.3 Color Measurement (Zhu et al., 2009) ..................................... 29
  3.4.4 Dietary Fiber Content (AOAC, 2005) ....................................... 29
  3.4.5 Gelatinization Temperature Analysis (Collado and Corke, 1999) ..................................................................................... 30
  3.4.6 Spreadability (Lai and Lin, 2006 and Zucco et al., 2011) ........ 30
  3.4.7 Texture Analysis (Rianti, 2008, with modification) .................. 30
  3.4.8 Sensory Analysis (Moskowitz et al., 2006) ............................... 30
  3.4.9 Protein Content (AOAC, 2005) .............................................. 31
  3.4.10 Fat Content (AOAC, 2005) ................................................... 31
  3.4.11 Ash Content (AOAC, 2005) .................................................. 32
  3.4.12 Carbohydrate Content (AOAC, 2005) .................................... 32

CHAPTER IV RESULTS AND DISCUSSION

4.1 Effect of Banana Variety and Anti-browning Pre-treatment Method
  On Banana-peel Flour Characteristics .............................................. 33
  4.1.1 Flour Yield ............................................................................ 34
  4.1.2 Color ..................................................................................... 35
  4.1.3 Dietary Fiber .......................................................................... 36
4.2 Effect of Banana-peel to Corn Flour Ratio and Gelatinization State
  of Corn Flour On Cookie Characteristics ........................................ 38
  4.2.1 Amylograph Results ............................................................... 39
CHAPTER V CONCLUSIONS AND SUGGESTIONS

5.1 Conclusions .................................................................................................. 56
5.2 Suggestions .................................................................................................. 57

BIBLIOGRAPHY ............................................................................................... 58
APPENDICES ..................................................................................................... 63
LIST OF TABLES

Table 2.1 Nutritional composition of several types of bananas ..................... 6
Table 3.1 Cookies formulation ....................................................................... 24
Table 3.2 Stage I research design .................................................................. 26
Table 3.3 Stage II research design .................................................................. 27

LIST OF APPENDICES

Appendix A. Taxonomical verification results for bananas ......................... A-1
Appendix B. Moisture content and yield of flours ..................................... B-1
Appendix C. Lightness of flour .................................................................. C-1
Appendix D. Dietary fiber content of flours.................................................. D-1
Appendix E. Proximate analysis of fresh banana-peels and best banana-
peel flour produced .................................................................................. E-1
Appendix F. Rapid viscosity analyzer result for corn flour gelatinization ...... F-1
Appendix G. Diameter increase and spread ratio of cookies ...................... G-1
Appendix H. Yield of cookies ...................................................................... H-1
Appendix I. Lightness of cookies ................................................................. I-1
Appendix J. Hardness of cookies ................................................................ J-1
Appendix K. Moisture content of cookies ..................................................... K-1
Appendix L. Hedonic test results for cookies ............................................... L-1
Appendix M. Scoring test results for cookies .............................................. M-1
Appendix N. Proximate analysis of the best cookie and corn flours .......... N-1
Appendix O. Dietary fiber content of cookies .............................................. O-1
