ACKNOWLEDGEMENTS

Firstly, writer would like to thank Jesus Christ for His grace and abundant blessings upon the writer during the accomplishment of this thesis entitled “THE EFFECT OF TEMPERATURE AND RELATIVE HUMIDITY TO THE SOLUBILITY KINETICS OF EFFERVESCENT POWDER JAVA TEA (Orthosiphon aristatus Bl. Miq) BASED DRINK DURING STORAGE” from the beginning until the end. This thesis is one of the requirements needed to obtain the degree of Sarjana Strata Satu Teknologi Pangan in Food Technology Department, Faculty of Industrial Technology, Universitas Pelita Harapan.

The writer realizes that this report could not be completed well and on time without any support, guidance, help and prayers from many sides. Writer feels truly thankful and would like to give gratitude to those related people who have given their supports, either directly or indirectly during the completion of the thesis, as follows.

1) Prof. C. Hanny Wijaya, as the supervisor for the availability of time and thought as well as remarkable guidance from the beginning until the completion of the thesis.

2) Mr. Jeremia Manuel Halim, MP, as the co-supervisor and the head of quality control laboratory for his time, guidance, support and the advices for the writer from the beginning until the completion of the thesis.

3) Mr. Tagor Marsillam Siregar, M. Si and Natania, M.Eng, as the thesis examiners for the guidance, suggestion and time during thesis examination.
4) Mrs. Julia Ratna Wijaya, MAppSc, as the head of Food Technology Department for the chance given for the completion of the thesis and the moral advices and support given to the writer.

5) Beloved parents, Adrian Suryawinata and Nitajani Rahardjo, Sulistijani, Kevin, Adrian Tjahjadi and all family for the endless supports, moral booster, and prayers.

6) All lectures in Food Technology Department, Universitas Pelita Harapan, for sharing their knowledge to the writer.

7) Mr. Hendra, Mrs. Merry, Mr. Aji, Mr. Darius Nikolaus, Mr. Donny F. Mogadi, as the laboratory’s employees for the help, time, guidance, and support during the research period in the laboratory.

8) Ms. Elok, Ms. Wulan, Ms. Yunita from Institut Pertanian Bogor, for the advices, supports and prayers from the beginning until the end of the thesis completion.

9) Mr. Tabligh Permama, S.Si, as the head of chemistry laboratory and supervisor at Swiss-German University for the availability of time, guidance, and support during the research.

10) Dessy Wijaya, Gabriella Dhea, Valencia, Evelyn Suteja, Marita, Christie Mandasari, and Jesslyn for being such tremendous best friends who always available to help whenever needed, support, give advices and accompany during the completion of the thesis.

11) Smile group for being such a splendid team who always count on and support each other from the early preparation of seminar until final defense.
12) Tan Edwin Tanadi, Lauw Kevin Pradipta, Elizabeth, Cindy, Felita, Monica Marshella, Natalia, Novita, Sylvi, Dimas, Caroline Gunawan, Edwin Hadrian, Merissa, Stephanie Maria, Kevie Aditya, Yuliana, Allen Igles, and other 2009 students who are completing the thesis in odd semester for the advices and supports.

13) All people that have given big contribution to the writer in finishing the thesis that cannot be mentioned one by one.

The writer realizes that this report is nowhere near perfect, thus the author would also appreciate the criticisms and suggestions regarding the reports. Hopefully, this report will give useful information for pertinent readers. Thank you.

Karawaci, March 2013

TABLE OF CONTENTS ...................................................................................... v

LIST OF TABLES .............................................................................................. vii

LIST OF FIGURES ........................................................................................... viii

LIST OF APPENDICES ...................................................................................... x

CHAPTER I INTRODUCTION .......................................................................... 1

1.1 Background ....................................................................................................... 1

1.2 Research Problem .............................................................................................. 2

1.3 Objectives .......................................................................................................... 3

1.3.1 General Objectives .................................................................................... 3

1.3.2 Specific Objectives .................................................................................... 3

CHAPTER II LITERATURE REVIEW ............................................................ 4

2.1 Java Tea Based Drink ........................................................................................ 4

2.2 Effervescent ....................................................................................................... 5

2.3 Storage of Effervescent ..................................................................................... 7

2.4 Shelf Life ........................................................................................................... 8

2.5 Food Packaging ................................................................................................ 10

2.5.1 Plastic Packaging ..................................................................................... 12

2.5.2 Metal Packaging ....................................................................................... 14
CHAPTER III RESEARCH METHODOLOGY .................................................. 16
3.1 Materials and Equipments........................................................................ 16
  3.1.1 Materials......................................................................................... 16
  3.1.2 Equipments..................................................................................... 16
3.2 Methods.................................................................................................... 17
  3.2.1 Preparatory Methods ........................................................................ 17
  3.2.2 Treatment of Analysis Methods....................................................... 18
3.3 Research Design....................................................................................... 25

CHAPTER IV RESULTS AND DISCUSSION ............................................. 28
4.1 The Effect of Relative Humidity................................................................. 28
  4.1.1 Dissolution Time.............................................................................. 28
  4.1.2 Moisture Content............................................................................. 30
  4.1.3 Color............................................................................................... 31
  4.1.4 Antioxidant Activity................................................................. 33
  4.1.5 pH............................................................................................... 36
  4.1.6 Foaming Volume................................................................. 37
4.2 The Effect of Storage Temperature............................................................ 38
  4.2.1 Dissolution Time.............................................................................. 39
  4.2.2 Moisture Content............................................................................. 41
  4.2.3 Color............................................................................................... 42
  4.2.4 Antioxidant Activity................................................................. 44
  4.2.5 pH............................................................................................... 45
  4.2.6 Foaming Volume................................................................. 47
4.3 Shelf Life of Effervescent Java Tea............................................................. 48

CHAPTER V CONCLUSIONS AND SUGGESTIONS................................. 55
5.1 Conclusions........................................................................................... 55
5.2 Suggestions........................................................................................... 55
