ACKNOWLEDGEMENTS

First of all, praise the Lord Jesus Christ for His endless blessings to the author in completing this thesis entitled “UTILIZATION OF GERMINATED COWPEA FLOUR (Vigna unguiculata [L.] Walp.) AS IRON SOURCE IN BLACK RICE-BASED COOKIES”. This thesis was written as the partial fulfillment of the academic requirements to obtain the degree of Sarjana Teknologi Pertanian Strata Satu, Food Technology Department, Faculty of Science and Technology, Universitas Pelita Harapan, Tangerang.

This thesis would not be completed and possible without the assistance, supports, guidance and prayers of many parties. Thus, the author would like to express gratitude to those who have helped and supported the author during this whole experience, including:

1. Prof. Dr. Manlian Ronald A. Simanjuntak, ST., MT., D.Min., as the Dean of Faculty of Science and Technology for the support during study in Universitas Pelita Harapan.

2. Ir. W. Donald R. Pokatong, M.Sc., Ph.D., Head of Food Technology Study Program, and as examiner who has given the author the opportunity to conduct this thesis project.

3. Ratna Handayani, MP, as the Deputy Head of Food Technology Study Program who has supported the author to perform the thesis project.

4. Lisa A. Yakhin, M.Eng as the supervisor who has given huge guidance, support, advices, time and patience to the author from the time this thesis project started up until its completion.
5. Yuniwaty Halim, M.Sc. as the Head of quality Control and Research Laboratory and also as examiner for the useful suggestions regarding thesis revisions and advices for academic improvement.

6. Dr. Nuri Arum Anugrahati, S.Si., M.P. as the academic supervisor for the guidance.

7. Natania, M.Eng, Dr. Adolf J. N. Parhusip, and Dr. Tagor M. Siregar, M.Si., as the Head of Food Processing, Microbiology, and Chemistry Laboratory who had given permission to the author to conduct research in the laboratories.

8. Virly, STP, Mateus Andra Gunawan, STP, Mr. Hendra, Mr. Adzie, Mr. Darius, and Mr. Yosafat for the support and guidance in the laboratories.

9. Beloved grandmother (Ratna Inggriani), father (David Irawan), mother (Shirleen Siskania) and little sister (Phelia Darleen Irawan) for the endless love, supports and prayers given to the author.

10. Beloved Sudanners: Evelyn, Claudia Severesia, Jessica Decyree, Lisa Angereni, Melita Paramita, Priscilla Olivia, Sianny Priskila Setiadi for the help, support, laughter, peeling sessions and togetherness during years of study in Universitas Pelita Harapan, especially during the research and report completion.

11. My roommate Nancy Olivia, my beloved friends Vania Harijanto and Yoshua, for the support given during this thesis completion.

12. Vanessa Christie and Josephine Lisa for the help and peeling sessions during laboratory works.
13. Fellow friends under supervision of the same supervisor, Nathania, Isha, Nike and Priscilla for the memorable moments during the thesis completion.

14. All lecturers and staffs in UPH Food Technology Department for the help given during the research.

15. All friends, families, relatives and others whose names cannot be mentioned one by one that have supported the author during the research and thesis completion.

The author completely realizes that this report is far from perfection, and will gladly welcome any criticisms and suggestions regarding this report in order to improve and achieve better results. Lastly, the author also hopes that this report would be useful for the readers. Thank you.

Tangerang, January 2017

## CHAPTER I INTRODUCTION

1.1 Background .................................................. 1
1.2 Research Problem ............................................. 3
1.3 Objectives ................................................... 4
   1.3.1 General Objectives ....................................... 4
   1.3.2 Specific objectives ..................................... 4

## CHAPTER II LITERATURE REVIEW

2.1 Iron in Human .................................................. 5
   2.1.1 Importance of Iron ....................................... 5
   2.1.2 Iron Metabolism and Absorption .......................... 6
2.2 Iron in Food ................................................... 8
   2.2.1 Cowpea .................................................... 8
   2.2.2 Black rice ................................................ 9
2.3 Phytic Acid .......................................................................................................................... 10
  2.3.1 Phytic Acid as Iron Inhibitor in Foodstuff ................................................................. 11
  2.3.2 Methods of Reducing Phytic Acid in Foodstuff ......................................................... 12
2.4 Germination .......................................................................................................................... 13
2.5 Cookies .................................................................................................................................. 14

CHAPTER III RESEARCH METHODOLOGY
  3.1 Materials and equipment ................................................................................................. 17
  3.2 Research Methodology .................................................................................................... 17
    3.2.1 Flours Preparation ..................................................................................................... 18
    3.2.2 Main Research .......................................................................................................... 19
  3.3 Experimental design ......................................................................................................... 20
  3.4 Methods of Analysis ......................................................................................................... 22
    3.4.1 Moisture Content (AOAC, 2005) ............................................................................. 22
    3.4.2 Chromameter Color Analysis (Subagio, 2004) ....................................................... 22
    3.4.3 Texture Analysis (Sa’adah, 2009) ............................................................................. 23
    3.4.4 Total Iron (AOAC, 2005 with modification) .............................................................. 23
    3.4.5 Phytic Acid (Garcia, et al., 1999) ........................................................................... 24
    3.4.6 Sensory Evaluation (Meilgard, et al., 2006) .............................................................. 25
    3.4.7 Ash Content (AOAC, 2005) .................................................................................... 26
    3.4.8 Total Fat Content (BSN, 1992) ................................................................................ 26
    3.4.9 Total Protein Content (AOAC, 2005 with modification) ........................................ 27
    3.4.10 Total Carbohydrate (AOAC, 2005) ....................................................................... 28

CHAPTER IV RESULTS AND DISCUSSIONS
  4.1 Flours ................................................................................................................................... 29
    4.1.1 Physicochemical Characteristics of Flours ............................................................... 29
4.1.3 Total Iron................................................................. 31
4.1.4 Phytic Acid Concentration........................................ 31
4.2 Cookies ......................................................................... 32
  4.2.1 Physicochemical Characteristics of Cookies .............. 33
  4.2.2 Sensory Properties of Cookies .................................. 37
  4.2.3 Sensory Acceptance of Cookies ................................. 43
  4.2.4 Total Iron Content................................................... 46
  4.2.5 Phytic Acid Concentration........................................ 47
4.3 Nutritional Composition of Best Formulated Cookies ...... 48

CHAPTER V CONCLUSIONS AND SUGGESTIONS
  5.1 Conclusions ................................................................ 51
  5.2 Suggestions ................................................................ 51

BIBLIOGRAPHY .................................................................. 53
APPENDICES ...................................................................... 56
LIST OF TABLES

Table 2.1 Nutrient values of cowpea.................................................................9
Table 2.2 Nutrient values of black rice.............................................................10
Table 2.3 Standard quality of biscuit according to SNI 01-2973-1992..................13
Table 3.1 Formulation of cookies ......................................................................17
Table 3.2 Experimental design ..........................................................................19
Table 3.3 Probe specification and settings in texture analyzer .........................21
Table 4.1 Moisture content of flours ...................................................................28
Table 4.2 Degree of whiteness of flours ..............................................................28
Table 4.3 Total iron content in flours ..................................................................31
Table 4.4 Phytic acid concentration in flours ......................................................31
Table 4.5 The effect of flour ratio on b* values of cookies .................................35
Table 4.6 The effect of flour ratio on brittleness of cookies ..................................41
Table 4.7 The effect of flour ratio on degree of likeness on color .......................44
Table 4.8 The effect of flour ratio on degree of likeness on hardness ..................44
Table 4.9 The effect of flour ratio on degree of likeness on mouthfeel ..............45
Table 4.10 The effect of flour ratio on degree of likeness on beany flavor .........45
Table 4.11 Nutritional compositions of GM 4:1 cookies ....................................49
LIST OF FIGURES

Figure 2.1 Chemical structure of heme iron ...................................................... 5
