ACKNOWLEDGEMENTS

My utmost gratitude to Jesus Christ for His grace and blessing for the completion of this thesis entitled EFFECT OF JACKFRUIT-SEED STARCH, BEESWAX, AND PLASTICIZERS ON COMPOSITE EDIBLE FILM CHARACTERISTICS AND ITS APPLICATION AS EDIBLE COATING TO STRAWBERRY FRUITS was completed. The writer is aware that this report would not be completed without the help and supports through assistance, prayer, and guidance of many people. Therefore, the writer would like to thank deeply to:

1. Prof. Dr. Manlian Ronald A.S., S.T., MT., as Dean of Faculty of Science and Technology Universitas Pelita Harapan.

2. Ir. W. Donald R. Pokatong, M.Sc., Ph.D., Head of Food Technology Study Program, and as Thesis Supervisor for the time and effort in guiding, support, and direction before and during the research, and precise editing and completion of the thesis.

3. Dr. Ir. Hardoko, MS. and Natania, M.Eng., Head of Food Processing Technology Laboratory, both acting as examiner for useful inputs regarding thesis revision.

4. Wenny Silvia Loren Sinaga, M.Si, as academic advisor for her support and guidance.

5. Yuniwati Halim, M.Sc., Dr. Adolf J. N. Parhusip, and Dr. Tagor M. Siregar as heads of Quality Control and Research, Microbiology, and Chemistry
laboratories, respectively, for permission to do research in the respective laboratory.

6. Julia Ratna Wijaya, MAppSc former Head of Food Technology Study Program and Sisi Patricia L. A. Gultom, M. Eng, as former Deputy Head Food Technology Study Program.

7. Adjie, Hendra, and Darius, as laboratory assistant; Andra, and Virly as lecturer assistant for the help during the research in the laboratory.

8. Beloved mother and sisters for their support, motivation, and prayer during the research.

9. Mei lina and Nadya Larasati, for their constants help during up and down moment, help, sharing, teamwork, and prayer during the research.

10. Melita Mulyani, Novia Tanasal, Vanessa Christie, Gracia Liunita, and Callista Trixie for the supports and prayers during the research.

11. Angeline Aprilina, Olivia Virginia, Benedicta Revata, and Yulia Tendean for the help and supports during the research.

12. Team Gembili: Josephine Lisa, Jessica Decyree, and Sianny Priskila for the help and support during this research.

13. Rizky Suwoto and Jordan Jovian for the help, support, and prayer during hard times of this research.

14. Clarentia Sharon Giovani for her great support and prayers during the hard times.

15. Pangan 5 for their help, support, and prayers during this research.

16. All 2013 batch of Food Technology Universitas Pelita Harapan who experienced the thesis research together.
17. All friends and Relatives who cannot be mentioned one by one.

The writer wants to say thank you for all guidance, support, suggestions, and prayer that means so much so the internship program and thesis report is well done. The author realize this thesis is far from perfect and the writer wants to apologize if unexpected things were done during internship program and the completion of this report. The writer hopes this report would be useful for the readers.

CHAPTER I INTRODUCTION 
1.1 Background ............................................................................................ 1  
1.2 Research Problem ................................................................................... 3  
1.3 Objectives ............................................................................................... 4  
  1.3.1 General Objectives ........................................................................... 4  
  1.3.2 Specific Objectives ........................................................................... 4  

CHAPTER II LITERATURE REVIEW 
2.1 Jackfruit ................................................................................................. 5  
2.2 Edible Film and Coating .......................................................................... 7  
  2.2.1 Characteristics of Edible Film/Coating ............................................. 8  
  2.2.2 Starch-Beeswax Composite Edible Coating ...................................... 9  
  2.2.3 Plasticizer .......................................................................................... 10  
    2.2.3.1 Glycerol ....................................................................................... 11  
    2.2.3.2 Sorbitol ....................................................................................... 11  
  2.3 Emulsifier ............................................................................................... 12  
  2.3.1 Lecithin ............................................................................................ 12
2.4 Strawberry .................................................................................................................. 13
2.4.1 Coated Strawberry ................................................................................................. 14

CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment .......................................................................................... 16
3.2 Research Stage ........................................................................................................... 16
  3.2.1 Research Stage I .................................................................................................... 17
    3.2.1.1 Jackfruit Seed Starch Isolation .................................................................. 17
    3.2.1.1 Composite Edible Film Preparation .......................................................... 18
  3.2.2 Research Stage II .................................................................................................. 20
3.3 Analysis ....................................................................................................................... 21
  3.3.1 Chemical Analysis ................................................................................................. 21
    3.3.1.1 Moisture Content ....................................................................................... 21
    3.3.1.2 Ash Content ............................................................................................... 21
    3.3.1.3 Protein Content Kjeldahl Nitrogen Method .............................................. 22
    3.3.1.4 Fat Content ............................................................................................... 22
    3.3.1.5 Carbohydrate Content .............................................................................. 23
    3.3.1.6 Starch Content Determination .................................................................. 23
    3.3.1.7 Amylose Content ....................................................................................... 24
    3.3.1.8 Whiteness Index (WI) .............................................................................. 24
  3.3.2 Edible Film Characteristics .................................................................................. 25
    3.3.2.1 Tensile Strength, Elongation, and Thickness ........................................... 25
    3.3.2.2 Water Vapor Transmission Rate with Modification ................................. 25
  3.3.3 Strawberry Properties .......................................................................................... 26
    3.3.3.1 pH ............................................................................................................. 26
    3.3.3.2 Total Sugar Lane-Eynon Method ............................................................... 26
    3.3.3.3 Total Titratable Acidity .......................................................................... 26
    3.3.3.4 Hardness .................................................................................................... 27
    3.3.3.5 Weight Loss ............................................................................................... 27
    3.3.3.6 Total Plate Count (TPC) .......................................................................... 27
    3.3.3.7 Hedonic Test ............................................................................................. 27
    3.3.3.8 Scoring Test .............................................................................................. 27
3.4 Experimental Design .................................................................................................. 28
3.4.1 Research Stage I ................................................................................................. 28
3.4.2 Research Stage II ............................................................................................... 31

CHAPTER IV RESULTS AND DISCUSSION
4.1 Taxonomical Verification and Chemical Composition of Jackfruit Seed ................ 33
4.2 Characteristics of Jackfruit Seed Starch ................................................................ 34
  4.2.1 Yield of Jackfruit Seed Starch .......................................................................... 34
  4.2.2 Degree of Whiteness ......................................................................................... 34
  4.2.3 Starch, Amylose, and Amylopectin Contents from Jackfruit Seed Starch ......... 34
4.3 Characteristics of Edible Film ................................................................................. 35
  4.3.1 Appearance .......................................................................................................... 35
  4.3.2 Tensile Strength ................................................................................................. 35
    4.3.2.1 Glycerol-Added Composite Edible Film ......................................................... 35
    4.3.2.2 Sorbitol-Added Composite Edible Film ......................................................... 37
  4.3.3 Elongation ........................................................................................................... 38
    4.3.3.1 Glycerol-Added Composite Edible Film ......................................................... 38
    4.3.3.2 Sorbitol-Added Composite Edible Film ......................................................... 40
  4.3.4 Thickness ........................................................................................................... 41
    4.3.4.1 Glycerol-Added Composite Edible Film ......................................................... 41
    4.3.4.2 Sorbitol-Added Composite Edible Film ......................................................... 42
  4.3.5 Water Vapor Transmission Rate (WVTR) ......................................................... 43
    4.3.5.1 Glycerol-Added Composite Edible Film ......................................................... 43
    4.3.5.2 Sorbitol-Added Composite Edible Film ......................................................... 45
4.4 Selected of Edible Films ......................................................................................... 46
4.5 Coated and Stored Strawberry .............................................................................. 47
  4.5.1 Scoring and Hedonic Test ................................................................................... 47
  4.5.2 Weight Loss ........................................................................................................ 50
    4.5.2.1 Room Temperature Storage ......................................................................... 50
    4.5.2.2 Refrigeration Temperature Storage ............................................................... 51
  4.5.3 Hardness ............................................................................................................ 52
    4.5.3.1 Room Temperature Storage ......................................................................... 52
    4.5.3.2 Refrigeration Temperature Storage ............................................................... 53
4.5.4 pH and Total Titratable Acidity ................................................................. 54
  4.5.4.1 Room Temperature Storage ................................................................. 54
  4.5.4.2 Refrigeration Temperature Storage ...................................................... 57
4.5.5 Total Sugar ............................................................................................... 59
  4.5.5.1 Room Temperature Storage ................................................................. 59
  4.5.5.2 Refrigeration Temperature Storage ...................................................... 61
4.5.6 Total Plate Count ..................................................................................... 62
  4.5.6.1 Room Temperature Storage ................................................................. 62
  4.5.6.2 Refrigeration Temperature Storage ...................................................... 65
4.5.7 Shelf Life .................................................................................................. 67

CHAPTER V CONCLUSIONS AND SUGGESTIONS
  5.1 Conclusions ............................................................................................... 70
  5.2 Suggestions ............................................................................................... 71

BIBLIOGRAPHY ................................................................................................. 73
APPENDICES ...................................................................................................... 80
LIST OF TABLES

Table 2.1 Chemical and Functional properties of jackfruit seed flour (%) ........ 6

LIST OF APPENDICES

Appendix A. Taxonomy Verification of Jackfruit Seed ........................................ A-1
Appendix B. Chemical Composition of Jackfruit Seed ..................................... B-1
Appendix C. Characteristics of Jackfruit Seed Starch ..................................... C-1
Appendix D. Tensile Strength and Elongation of Edible Film .......................... D-1
Appendix E. Thickness and Water Vapor Transmission Rate of Edible Film ......... E-1
Appendix F. Scoring Test .................................................................................. F-1
Appendix G. Hedonic Test ................................................................................ G-1
Appendix H. Weight Loss of Strawberry Fruit ................................................... H-1
Appendix I. Hardness of Strawberry Fruit ....................................................... I-1
Appendix J. pH of Strawberry Fruit ................................................................ J-1
Appendix K. Total Titratable Acidity of Strawberry Fruit ............................... K-1
Appendix L. Total Sugar of Strawberry Fruit ..................................................... L-1
Appendix M. Total Plate Count of Strawberry Fruit ....................................... M-1
Appendix N. Shelf Life of Strawberry Fruit ..................................................... N-1
