ACKNOWLEDGEMENTS

First of all, I want to thank God very much because of His power and blessings I could do this final project. This report contains the research result of flavor analysis of three different papaya cultivars. This final project was conducted as one of the compulsory programs for acquiring the bachelor degree in Food Technology Department of Universitas Pelita Harapan.

The author realizes that the final project and its report could not be accomplished without help, guidance, supports, and prayers from many people. Therefore in this opportunity, I would like to thank the people involved in my internship and the completion of this report as follows.

1) Prof. Dr. C. Hanny Wijaya as my final project supervisor for giving me this project, kind guidance, and wide access for the importance of this research since the beginning of this final project to the completion of this report. I especially want also thank her for her great faith and support to her students.

2) Mrs. Julia Ratna Wijaya, MAppSc. as my co-supervisor who was professionally guided me since the beginning of this final project.

3) Mrs. Nuri Arum Anugrahati, MP. as the Head of Food Technology Department for being a great Head of this department.

4) Pusat Kajian Buah Tropika for allowing me to join this research program.

5) The Republic of Indonesia, Direktorat Penelitian dan Pengabdian kepada Masyarakat-Direktorat Jenderal Pendidikan Tinggi (DP2M-DIKTI), that has partially financially supported this project.
6) *Institut Pertanian Bogor* and staffs for allowing me to conduct my research there.

7) Flavor laboratory of Indonesian Center for Rice Research for letting me use the GC-MS and GC-O there.

8) PT Symrise, especially Ibu Maryati Djugo, for giving me some flavor chemical standards.

9) My beloved family members for loving me unconditionally and having faith in me.

10) Lauralia Bernetta Poerwoko, my little *marmut*, for caring about me and giving me inspiration.

11) Jessica Ignacia, my little angel, and Gracella Christie for reminding me again and again that there was still time. Without you, I might have been left behind.

12) Tefvina Saputra and Feny Tanijaya for helping me in an urgent situation in accomplishing this thesis.

13) Meiliana Lukman and Steffi Agustine who helped me so much during my study at UPH.

14) My classmates, all members of Pangan C’08, for being there with me and bringing inspiration to me for these more than 3 years.

15) My kind new IPB friends who filled my days during the research, especially my dear GC-O panelists: Marisa Chang, Adi Indra Permana, Kevin Angga Saputra, Anisa Rahmadani Yani, Dimas Supriyadi, and Punjung Renjani; and two my funny friends who were there for me: Dede Saputra and Ranti Rizka Ramadhini.
16) My dear best friends, Febryanti Mega Kristiani and Arthur Permadi, for their support and being there for me and listen to me whenever I called.

17) Benardo Huang, Yohannes, and Jeffri Martono for the accommodation during my back and forth Bogor-Karawaci period time.

18) The last but not the least, the rest of all people who I cannot mention one by one.

The author realizes that this research and the report are not perfect. Thus, the author appreciates the readers’ concerns and suggestions for this report. At last, the author hopes this report can be useful for the readers. Thank you.
