Praise the Lord Jesus Christ for His continuous guidance and endless blessings that have been given to the author throughout the research and completion of this thesis report entitled “STUDY OF THE UTILIZATION OF GUAVA (Psidium guajava L.) LEAVES AND CHIA SEEDS IN THE MAKING OF EDIBLE SHEETS”. This report is one of the requirements in obtaining bachelor degree in Food Technology Department at Universitas Pelita Harapan. This thesis research and report will not be completed without the support, assistance, and guidance from others. Hence, the author would like to express the greatest gratitude to those who has given their supports and guidance, including:

1) Sisi Patricia Gultom, M. Eng, as thesis supervisor for the time, effort and support in guiding throughout thesis research and completion of the report.

2) Julia Ratna Wijaya, MAppSc, as the Head of Food Technology Department, Faculty of Science and Technology, Universitas Pelita Harapan.

3) Yuniwaty Halim, MSc, Dr. Ir. Melanie Cornelia, MT and Ratna Handayani, MP as head of laboratories for giving the author permission to conduct the thesis research.

4) Ir. W. Donald R. Pokatong, M.Sc., Ph.D. as examiner and Natania, M.Eng as head of laboratory and examiner for useful suggestions regarding thesis revisions.

5) Adzie, Hendra, Darius, and Meri as laboratory assistants for the help and guidance during the research.
6) All lecturers who have taught during the author’s study period in Universitas Pelita Harapan.

7) Beloved family including father (Liman Gunawan), mother (Erna Indriati) and sister (Yoshita) for their support and prayer during research and finishing this thesis report.

8) Christine, Priscilla Destiana Erwandi, Jossiana Liauwan, Ferix Jonathan, Mateus Andra Gunawan, Jimmy Jaya Nugraha, Cindy Irawati, Virly, Nadia Catherine Prima Onasie, Tiara Cahyadi, Frisca Christabella, Bella Kumalasari, Diana Effendi, Alfindra Ersanko, Debora, Ivena Grace, Bella Natasha, Yunita Ng, Sinthia Tan and Yohanes Cahya Saputra for the help and support given to the author during thesis research.

9) Juli Tabita, Susilavati Darmawan, Kristine Rita, Cindy Frencya Halim, Yoana Sefrita, Cynthia Dewi, Yongky Sanjaya and Wilsen Martin for the support given to the author during thesis research and completion of thesis report.

10) All friends from C class of Food Technology 2012 Universitas Pelita Harapan for the support and togetherness shared with the author during the research and thesis report completion.

11) All of the panelists involved in this research for the time and willingness to participate.

12) All friends and close relavites who are not yet mentioned but have supported the author during thesis research and completion of the report.

The author is aware that this report is not perfect and it may contain many mistakes, whether the expected or unexpected ones. Therefore, author would like to deliver apology as well as humbly welcome any critics and suggestions given
to improve this report with great pleasure. Finally, the author hopes that this report would be helpful for the readers. Thank you.

Tangerang, February 2016

ABSTRACT ........................................................................................................ ii

ACKNOWLEDGEMENTS ............................................................................... vi

TABLE OF CONTENTS .................................................................................. ix

LIST OF TABLES .......................................................................................... xii

LIST OF FIGURES ........................................................................................ xiii

LIST OF APPENDICES .................................................................................. xv

CHAPTER I  INTRODUCTION

1.1 Research Background ........................................................................... 1
1.2 Research Problems ............................................................................... 3
1.3 Research Objectives ............................................................................ 3
  1.3.1 General Objective ........................................................................ 3
  1.3.2 Specific Objectives ...................................................................... 3

CHAPTER II  LITERATURE REVIEW

2.1 Guava (Psidium guajava L.) .................................................................. 5
  2.1.1 Guava (Psidium guajava L.) Leaves ........................................... 5
2.2 Chia Seeds (Salvia hispanica L.) ............................................................ 8
  2.2.2 Nutritional Value of Chia Seed .................................................... 9
2.3 Hydrocolloids ...................................................................................... 11
  2.3.1 Carrageenan ............................................................................... 12
  2.3.2 Alginate ...................................................................................... 13
  2.3.3 Agar ............................................................................................ 14
    2.3.3.1 Agar Production ................................................................. 15
2.4 Making of Nori sheets ........................................................................ 16
CHAPTER III  RESEARCH METHODOLOGY

3.1 Materials and Equipment ................................................................. 18
3.2 Research Stages ............................................................................. 19
  3.2.1 Preliminary Research .......................................................... 19
  3.2.2 Main Research ......................................................................... 20
3.3 Experimental Design .......................................................................... 22
  3.3.1 Preliminary Research I .......................................................... 22
  3.3.2 Preliminary Research II .......................................................... 23
  3.3.3 Main Research I ....................................................................... 24
  3.3.3.1 Determination of Edible Sheet Formulation based on Tensile Strength ........................................................................... 26
  3.3.4 Main Research II ....................................................................... 27
3.4 Methods of Analysis ........................................................................... 28
  3.4.1 Identification Test ...................................................................... 28
  3.4.2 Tensile Strength ........................................................................ 28
  3.4.3 Water Activity ........................................................................... 28
  3.4.4 Color ......................................................................................... 28
  3.4.5 Proximate Analysis ................................................................... 29
    3.4.5.1 Moisture Content ............................................................... 29
    3.4.5.2 Ash Content ........................................................................ 29
    3.4.5.3 Protein Content ................................................................... 30
    3.4.5.4 Fat Content ......................................................................... 31
    3.4.5.5 Carbohydrate Content ........................................................ 32
  3.4.6 Sensory Evaluation .................................................................. 32
    3.4.6.1 Scoring test .......................................................................... 32
    3.4.6.2 Hedonic test ......................................................................... 32

CHAPTER IV  RESULTS AND DISCUSSION

4.1 Raw Ingredients .................................................................................. 33
4.2 Effect of Different Temperature and Ratio of Water towards Weight Changes of Chia Seeds ................................................................. 33
4.3 Effect of Different Time of Soaking towards Weight Changes of Chia Seeds ...................................................... 35

4.4 Effect of Different Type and Concentration of Binder towards Physical Characteristics of Edible Sheet ................................................................. 36
  4.4.1 Yield (%) ........................................................................ 36
  4.4.2 Tensile Strength .............................................................. 36
  4.4.3 Thickness ....................................................................... 38
  4.4.4 Color .............................................................................. 38
    4.4.4.1 Lightness ................................................................. 38
    4.4.4.2 °Hue ...................................................................... 39

4.5 Effect of Different Type and Concentration of Binder towards Chemical Characteristics of Edible Sheet ......................................................... 40
  4.5.1 Water Activity ($A_w$) .................................................. 40

4.6 Effect of Different Ratio of Guava Leaves and Hydrated Chia Seeds towards Sensory Evaluation of Edible Sheet ............................................. 42
  4.6.1 Aroma ........................................................................... 42
  4.6.2 Color ........................................................................... 43
  4.6.3 Taste ............................................................................ 43
  4.6.4 Aftertaste ................................................................. 45
  4.6.5 Texture ........................................................................ 46
  4.6.6 Overall ........................................................................ 48

4.7 Determination of Most Preferred Edible Sheet ......................... 49

4.8 Nutritional Composition of Most-Preferred Edible Sheet ............ 49

CHAPTER V CONCLUSIONS AND SUGGESTIONS
  5.1 Conclusions ..................................................................... 51
  5.2 Suggestions ..................................................................... 52

BIBLIOGRAPHY ....................................................................... 53
APPENDICES ............................................................................. 59
LIST OF TABLES

Table 2.1 Antioxidant activity of the isolated compounds ........................................ 7

LIST OF APPENDICES

Appendix A. Guava (Psidium guajava L.) leaves’ identification test result ...... A-1
Appendix B. Proximate Analysis of Fresh Guava (Psidium guajava L.) leaves.......................................................... B-1
Appendix C. Proximate analysis for hydrated Chia (Salvia hispanica L.) seeds.......................................................... C-1
Appendix D. Questionnaire for scoring test and hedonic test....................... D-1
Appendix E. Objective measurement results of chia seeds for preliminary research I....................................................................... E-1
Appendix F. Objective measurement results of chia seeds for preliminary research II....................................................................... F-1
Appendix G. Objective measurement results of the edible sheet for main research I for physical parameters ........................................... G-1
Appendix H. Objective measurement results of the edible sheet for main research I for chemical parameters ........................................... H-1
Appendix I. Scoring evaluation of the edible sheet for main research II......... I-1
Appendix J. Hedonic evaluation of the edible sheet for main research II ........ J-1
Appendix K. Proximate analysis of most preferred edible sheet ................. K-1
Appendix L. Physical Appearance of Edible Sheets in Main Research I ........ L-1
