ACKNOWLEDGEMENTS

A deep gratitude is given to God for his blessing to this thesis entitled CHARACTERIZATION OF EDIBLE FILMS PREPARED FROM BASE FORMULATIONS AND CINNAMON EXTRACT OR ANISE OIL AS NATURAL ANTIMICROBIAL, AND APPLICATION AS EDIBLE COATING TO STRAWBERRY was completed. The writer is aware that this report would not be completed without the help of many people. Therefore, the writer would like to thank deeply to:

1) Ir. W. Donald R. Pokatong, MSc., Ph.D. as Head of Food Technology Department and Thesis Supervisor for the guidance, support, and direction before and during the research and the completion of the thesis.

2) Julia Ratna Wijaya, MAppSc as the former Head of Food Technology Department

3) Sisi Patricia L. A. Gultom, M. Eng, a former Deputy Head and Natania, M.Eng, Head of Food Processing Technology Laboratory, both acting as examiner for their input for thesis revision.

4) Dr. Ir. Melanie Cornelia, MT., Dr. Adolf J.N. Parhusip, Ratna Handayani, MP. Deputy Head of Food Technology Department, and Yuniawati Halim, M.Sc as the head of laboratory for the permission in doing the research in the respective laboratory.

5) Ms. Merry, Mr. Hendra, Mr. Aji, Mr. Darius, and Mr. Yosafat as the laboratory assistant for the help during the research in the laboratory.
6) My beloved family for the support, motivation, and prayers during the research.

7) Katherine Katy Gani and Lulu Luzziarti for the help, sharing, and teamwork during the research.

8) Leonardo Chandra for the love, help, support, motivation, and prayers during the research.

9) BEM-UPH 2013/2014 and BEM-UPH 2014/2015 for the support and help during the research.

10) All 2012 batch, who experienced thesis research together.

11) People whom cannot be mentioned one by one.

The writer is aware that this thesis is far from perfect, thus the writer would like to apologize in advance if there were mistakes and errors in the report. The writer hoped that this thesis report could be useful for those who read it. Thank you.

Tangerang, July 2016

CHAPTER I INTRODUCTION
1.1 Background ........................................... 1
1.2 Research Problem .................................... 3
1.3 Objectives ........................................... 4
   1.3.1 General Objective ................................ 4
   1.3.2 Specific Objectives .............................. 4

CHAPTER II LITERATURE REVIEW
2.1 Jackfruit ............................................ 6
   2.1.1 Jackfruit Seed ..................................... 6
      2.1.1.1 Jackfruit Seed Starch ......................... 7
   2.2 Antimicrobial and Its Sources .................... 8
       2.2.1 Cinnamon ........................................ 8
       2.2.2 Anise ............................................. 9
   2.3 Strawberry ......................................... 10
   2.4 Edible Packaging .................................. 12
       2.4.1 Edible Film ..................................... 12
CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment .......................................................... 18
3.2 Research Stages ........................................................................ 19
  3.2.1 Stage I Research ................................................................. 19
    3.2.1.1 Jackfruit Seed Starch Extraction ................................... 19
    3.2.1.2 Natural Antimicrobial Preparation ............................... 21
      3.2.1.2.1 Cinnamon Extract .............................................. 21
    3.2.1.3 Edible Film Preparation .............................................. 22
  3.2.2 Stage II Research .............................................................. 23
3.3 Experimental Design .................................................................. 24
  3.3.1 Research Stage I ................................................................. 24
    3.3.1.1 Edible Film Preparation .............................................. 24
  3.3.2 Research Stage II .............................................................. 27
3.4 Analysis ..................................................................................... 28
  3.4.1 Chemical Analysis ............................................................... 28
    3.4.1.1 Moisture Content (AOAC, 2005) ................................. 28
    3.4.1.2 Ash Content (AOAC, 2005) ........................................ 28
    3.4.1.3 Protein Content (AOAC, 2005) ..................................... 29
    3.4.1.4 Fat Content (AOAC, 2005) .......................................... 29
    3.4.1.5 Carbohydrate Content ................................................ 30
    3.4.1.6 Degree of Whiteness (Munoz, et al., 2008) .................. 30
3.4.1.7 Starch, Amylose, and Amylopectin Content........................................... 30
3.4.2 Natural Antimicrobial Activity Verification ........................................... 32
  3.4.2.1 Rejuvenation of Microorganism ......................................................... 32
    3.4.2.1.1 Rejuvenation of Bacteria .............................................................. 32
  3.4.2.1.2 Rejuvenation of Fungi ................................................................ 33
  3.4.2.2 Well-diffusion for Cinnamon Extract ................................................. 33
  3.4.2.3 Disc-diffusion for Anise Oil ................................................................. 34
3.4.3 Edible Film Characteristics ................................................................. 34
  3.4.3.1 Tensile Strength and Elongation ........................................................... 34
  3.4.3.2 Thickness ......................................................................................... 34
  3.4.3.3 Water Vapor Transmission Rate (ASTM, 1995) ................................... 35
3.4.4 Strawberry Properties ........................................................................... 35
  3.4.4.1 Scoring Test ....................................................................................... 35
  3.4.4.2 Hedonic Test ...................................................................................... 35
  3.4.4.3 Weight Loss ....................................................................................... 36
  3.4.4.4 Hardness ............................................................................................. 36
  3.4.4.5 pH (AOAC, 2005) ............................................................................. 36
  3.4.4.6 Total Titratable Acid (Oyeleke & Olaniyan, 2007) ............................. 36
  3.4.4.7 Total Sugar Lane-Eynon (AOAC, 2005) .............................................. 36
  3.4.4.8 Total Plate Count .............................................................................. 37

CHAPTER IV RESULTS AND DISCUSSION

4.1 Species Verification and Chemical Composition of Jackfruit Seed ........... 38
4.2 Characteristics of Jackfruit Seed Starch ..................................................... 38
  4.2.1 Yield of Starch from Jackfruit Seed ....................................................... 38
  4.2.2 Degree of Whiteness ......................................................................... 39
  4.2.3 Starch, Amylose, and Amylopectin Contents from Jackfruit Seed Starch ......................................................... 39
4.3 Verification of Antimicrobial Activity of Natural Antimicrobial .......... 39
4.4 Characteristics of Edible Film ................................................................. 40
  4.4.1 Appearance ......................................................................................... 40
  4.4.2 Tensile Strength .................................................................................. 41
4.4.3 Elongation .................................................................................................................. 43
4.4.4 Thickness ................................................................................................................ 44
4.4.5 Water Vapor Transmission Rate ............................................................................. 45
4.5 Coated and Stored Strawberry .................................................................................... 46
  4.5.1 Scoring and Hedonic Test ...................................................................................... 46
  4.5.2 Weight Loss ........................................................................................................... 48
    4.5.2.1 Room Temperature Storage ....................................................................... 48
    4.5.2.2 Refrigeration Temperature Storage ........................................................... 49
  4.5.3 Hardness ................................................................................................................. 51
    4.5.3.1 Room Temperature Storage ....................................................................... 51
    4.5.3.2 Refrigeration Temperature Storage ........................................................... 52
  4.5.4 pH and Total Titratable Acid ................................................................................. 53
    4.5.4.1 Room Temperature Storage ....................................................................... 53
    4.5.4.2 Refrigeration temperature Storage .............................................................. 56
  4.5.5 Total Sugar ............................................................................................................. 58
    4.5.5.1 Room Temperature Storage ....................................................................... 58
    4.5.5.2 Refrigeration Temperature Storage ........................................................... 60
  4.5.7 Total Plate Count .................................................................................................... 61
    4.5.7.1 Room Temperature Storage ....................................................................... 61
    4.5.7.2 Refrigeration Temperature Storage ........................................................... 63
  4.5.8 Shelf life ................................................................................................................ 65
    4.5.8.1 Room Temperature Storage ....................................................................... 65
    4.5.8.2 Refrigeration Temperature Storage ........................................................... 66

CHAPTER V CONCLUSIONS AND SUGGESTIONS
  5.1 Conclusions .............................................................................................................. 68
  5.2 Suggestions ............................................................................................................... 69

BIBLIOGRAPHY .............................................................................................................. 70
APPENDICES .................................................................................................................... 1
LIST OF TABLES

Table 2.1 Composition of jackfruit seed................................................................. 7
Table 2.2 Nutritional values of fresh strawberry fruit ............................................. 11
Table 3.1 Experimental design for the combination of starch-plasticizer
with either cinnamon extract (a) or anise oil (b) ................................................. 24
Table 4.1 Chemical composition of jackfruit seed in dry basis
(except moisture content).................................................................................. 38
Table 4.2 Antimicrobial activity of cinnamon extract (a) and anise oil (b).......... 40
Table 4.2 Scoring test result for uncoated and coated strawberries
at storage-initial time ......................................................................................... 47
Table 4.3 Hedonic test result for uncoated and coated strawberry
at storage-start time ......................................................................................... 48
LIST OF FIGURES

LIST OF APPENDICES

Appendix A. Species Verification of Jackfruit Seed .................................................. A-1
Appendix B. Chemical Composition of Jackfruit Seed ........................................... B-1
Appendix C. Characteristics of Jackfruit Seed Starch .......................................... C-1
Appendix D. Antimicrobial Activity of Natural Antimicrobial ........................... D-1
Appendix E. Tensile Strength and Elongation of Edible Film ............................ E-1
Appendix F. Thickness and Water Vapor Transmission Rate of Edible Film ...... F-1
Appendix G. Sensory Test .................................................................................. G-1
Appendix H. Hedonic Test .................................................................................. H-1
Appendix I. Weight Loss of Strawberry Fruit ..................................................... I-1
Appendix J. Hardness of Strawberry Fruit ............................................................. J-1
Appendix K. pH of Strawberry Fruit ................................................................. K-1
Appendix L. Total Titratable Acid of Strawberry Fruit ....................................... L-1
Appendix M. Total Sugar of Strawberry Fruit .................................................... M-1
Appendix N. Total Plate Count of Strawberry Fruit .......................................... N-1
Appendix O. Shelf Life of Strawberry Fruit ......................................................... O-1
