ACKNOWLEDGEMENTS

First of all, author wants to thank Jesus Christ for the blessing that He gives during research and completion of this thesis report. Author realizes that only with God’s help and direction, author can finish the thesis project. Thesis with title “CHARACTERIZATION OF EDIBLE FILM FROM BASE FORMULATION AND PEPPERMINT OR LEMONGRASS OIL, AND APPLICATION AS EDIBLE COATING TO STRAWBERRY” was written as partial fulfillment of the academic requirements to obtain the degree of Sarjana Teknologi Pertanian Strata Satu, Food Technology Department, Faculty of Science Technology, Universitas Pelita Harapan, Tangerang.

Author realizes that without help, guidance, prayer by many parties, this thesis could not be done successfully without the help by many people. Therefore, author wants to express gratitude for those who help and support author during thesis, including:

1) Ir. W. Donald R. Pokatong, MSc., Ph.D., Head of Food Technology Department and as Thesis Supervisor for the time, guidance, and support during research and thesis completion.

2) Prof. Dr. Manlian Ronald A. S., ST., MT., Dean of Faculty of Science and Technology.

3) Julia Ratna Wijaya, M.AppSc, former Head of Food Technology Department and Dr. Adolf J. N. Parhusip, Head of Food Microbiology Laboratory, both acting as the examiners regarding their input for thesis revision.
4) Sisi Patricia L. A. Gultom, M. Eng as former Deputy Head of Food Technology.

5) Yuniawati Halim, MSc, Dr. Ir. Melanie Cornelia, MT, Ratna Handayani, MP Deputy Head of Food Technology, Natania, M. Eng as the head of laboratory for the permission in doing the research in the respective laboratory.

6) Mr. Hendra, Mr. Aji, Mr. Darius, Mr. Yosafat, Ms. Merry as laboratory assistant for the helps while doing research in laboratory.

7) Beloved father (Marjohan Gani), mother (Ivonny Gazali), brother (Aldo Gani), and all family members for the endless prayers, help, and supports.

8) Angelita Bong and Lulu Luzuarti for the support during research.

9) Glen Jonathan for the love and supports during research.

10) All members of 2012 C for the support.

11) People who cannot be mentioned one by one.

Author realizes that this report is still far for perfect and might contain some errors; therefore, author would like to apologize in advance and would accept any suggestion for this thesis report. Author also hopes this report can be useful for the reader. Thank you.

ABSTRACT ........................................................................................................... v  
ACKNOWLEDGEMENTS ....................................................................................... vi  
TABLE OF CONTENTS ..................................................................................... viii  
LIST OF TABLES ............................................................................................... xii  
LIST OF FIGURES ............................................................................................ xiii  
LIST OF APPENDICES ..................................................................................... xv  

CHAPTER I INTRODUCTION  
1.1 Background .................................................................................................. 1  
1.2 Research Problem ......................................................................................... 3  
1.3 Objectives ..................................................................................................... 4  
  1.3.1 General Objective .................................................................................... 4  
  1.3.2 Specific Objectives .................................................................................. 4  

CHAPTER II LITERATURE REVIEW  
2.1 Jackfruit Seed ............................................................................................... 5  
  2.1.1 Jackfruit Seed Starch ............................................................................. 7  
2.2 Natural Antimicrobial Agent and Its Sources ............................................ 8  
  2.2.1 Lemongrass ............................................................................................. 10  
  2.2.2 Peppermint ............................................................................................. 12  
2.3 Strawberry .................................................................................................... 14  
2.4 Edible Films and Coatings ......................................................................... 16  
  2.4.1 Edible Coating Production .................................................................... 18  
  2.4.2 Source of Edible Film and Coating ..................................................... 19  
    2.4.2.1 Starch-based Edible Coatings ....................................................... 20
2.4.2.2 Lipid-Based Edible Coatings ................................................. 20
2.4.3 Addition of Additives to Edible Coatings ................................ 21
2.5 Application of Edible Films and Coatings to Food Products .......... 22
2.5.1 Application of Edible Coating to Strawberry ............................ 23

CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment ................................................................. 26
3.2 Research Stage .................................................................................. 27
  3.2.1 Research Stage I ......................................................................... 27
    3.2.1.1 Jackfruit Seed Starch Extraction ........................................... 27
    3.2.1.3 Edible Film Preparation ....................................................... 28
  3.2.2 Research Stage II ......................................................................... 30
3.3 Experimental Design .......................................................................... 31
  3.3.1 Research Stage 1 ......................................................................... 31
    3.3.1.1 Edible Film Preparation ....................................................... 31
  3.3.2 Research Stage II ......................................................................... 34
3.4 Analysis .............................................................................................. 35
  3.4.1 Antimicrobial Activity Determination of Peppermint and 
    Lemongrass Oil ................................................................................ 35
    3.4.1.1 Microorganism Strain and its Rejuvenation ............................ 35
    3.2.1.2 Antimicrobial Verification Test ............................................. 35
  3.4.2 Jackfruit Seed Starch Chemical Analysis ...................................... 36
    3.4.2.1 Moisture Content (AOAC, 2005) ......................................... 36
    3.4.2.2 Ash Content (AOAC, 2005) ................................................. 37
    3.4.2.3 Protein Content (AOAC, 2005) .......................................... 37
    3.4.2.4 Fat Content (AOAC, 2005) ................................................. 38
    3.4.2.5 Carbohydrate (Method by Difference) ................................. 38
    3.4.2.6 Degree of Whiteness (Almenar et al., 2008) ....................... 38
    3.4.2.7 Starch, Amylose, Amylopectin Content ............................... 39
  3.4.3 Edible Film Characteristics ............................................................ 41
    3.4.3.1 Thickness ............................................................................ 41
    3.4.3.2 Tensile Strength and Elongation .......................................... 41
    3.4.3.3 Water Vapor Transmission Rate (ASTM, 1995) .................. 41
3.4.4 Strawberry Properties .............................................................. 41
  3.4.4.1 Hardness ........................................................................... 41
  3.4.4.2 Weight loss ..................................................................... 42
  3.4.4.3 pH (AOAC, 2005) .............................................................. 42
  3.4.4.4 Total Sugar Lane-Eynon (AOAC, 2005) ......................... 42
  3.4.4.5 Total Titratable Acid (Oyeleke & Olaniyan, 2007) ........... 42
  3.4.4.6 Total Plate Count ............................................................. 43
  3.4.4.7 Hedonic test ..................................................................... 43
  3.4.4.8 Scoring test ..................................................................... 43

CHAPTER IV RESULTS AND DISCUSSION
  4.1 Jackfruit Species Verification and Chemical Composition ........ 44
  4.2 Jackfruit Seed Starch Characteristics ....................................... 45
    4.2.1 Starch Yield, Purity, Degree of Whiteness ......................... 45
    4.2.2 Starch Amylose and Amylopectin Content ......................... 45
  4.3 Verification of Antimicrobial Activity of Peppermint and Lemongrass Oil ................................................................. 46
  4.4 Edible Film Characteristics ...................................................... 47
    4.4.1 Appearance ...................................................................... 47
    4.4.2 Tensile Strength ................................................................ 48
    4.4.3 Elongation ....................................................................... 51
    4.4.4 Thickness ........................................................................ 53
    4.4.5 Water Vapor Transmission Rate ......................................... 54
  4.5 Application of Edible Coating to Strawberry ......................... 58
    4.5.1 Hedonic and Scoring Test of Coated Strawberries at Initial Storage Time ................................................................. 58
    4.5.2 Weight Loss of Strawberry Fruit ........................................ 61
      4.5.2.1 Room Temperature Storage ........................................ 61
      4.5.2.2 Refrigeration Temperature Storage .............................. 63
    4.5.3 Hardness of Strawberry Fruit ............................................. 64
      4.5.3.1 Room Temperature Storage ........................................ 64
      4.5.3.2 Refrigeration Temperature Storage .............................. 66
    4.5.4 pH of Strawberry Fruit ..................................................... 67
LIST OF TABLES

Table 2.1 Nutritional compositions of jackfruit seed per 100 g............................ 6
Table 2.2 Biological activities of lemongrass oil.............................................. 11
Table 2.3 Component of peppermint oil .......................................................... 13

LIST OF APPENDICES

Appendix A. Jackfruit Taxonomic Verification ................................................. A-1
Appendix B. Jackfruit Seed Chemical Composition ........................................ B-1
Appendix C. Jackfruit Seed Starch Extraction ................................................ C-1
Appendix D. Antimicrobial Activity of Peppermint and Lemongrass Oil .......... D-1
Appendix E. Tensile Strength and Elongation ............................................... E-1
Appendix F. Water Vapor Transmission Rate and Thickness ......................... F-1
Appendix G. Hedonic Test ........................................................................... G-1
Appendix H. Scoring Test ........................................................................... H-1
Appendix I. Weight Loss of Strawberry Fruit ............................................... I-1
Appendix J. Texture of Strawberry Fruit ....................................................... J-1
Appendix K. pH of Strawberry Fruit .............................................................. K-1
Appendix L. Total Tritatable Acidity of Strawberry Fruit ............................. L-1
Appendix M. Total Sugar of Strawberry Fruit ............................................... M-1
Appendix N. Total Plate Count of Strawberry Fruit ...................................... N-1
Appendix O. Observation Results of Coated Strawberry Shelf Life ............. O-1
