ACKNOWLEDGEMENTS

Firstly, the author would like to thank Jesus Christ for His blessing to the author in completing the thesis report “FRACTIONATION AND IDENTIFICATION OF POTENTIAL FERMENTATION INHIBITOR(S) FROM RAMBUTAN (NEPHELIUM LAPPACEUM L.) PEEL EXTRACTS APPLIED TO CIDER PRODUCTION”. The author realized that this report would not be completed without the assistance, guidance, support, and prayers from others. Therefore, the author wants to express gratitude to those who had helped and supported the author, including:

1) W. Donald R. Pokatong, Ph.D. as the main supervisor who gave his guidance, support, advice, information and time to the author since the beginning of the research until the completion of the thesis.

2) Lisa Amanda Yakhin, M.Eng as the co-supervisor who gave assistance, support and time to the author since the beginning of the research until the completion of the thesis.

3) Julia Ratna Wijaya, MAppSc as the head of Food Technology Department for the opportunity given to the author to conduct the research.

4) Jeremia Manuel Halim MP, Ratna Handayani, MP, Dr. Adolf J. N. Parhusip, Natania, M.Eng, and Ir. Melanie Cornelia, MT as the Heads of Quality Control, Research, Microbiology, Food Processing, and Chemistry Laboratories, respectively.

5) Mrs. Merri Susanti, Mr. Hendra, Mr. Vicky, Mr. Yosafat, Mr. Adzie, Mr. Darius, and Mrs. Rachel Catherina for the help during the research.
6) Beloved father (Jusak Obadja), mother (Noek Sulandari), sister (Claresta Lemuella Corina), and all family for the help, support and prayers given to the author during the research and thesis completion.

7) Aprillio Rizky Pratama who helped and supported the author during the research and finishing the thesis.

8) Grace Sheila Jonatan, Irene Astrialim, and Ivan Junio whom supervised under the same main supervisor for the help, support, motivation and joy during the research and thesis completion.

9) Suhartaty, S.TP, William Pratama, Chintya Aisyah, Susanti Amelia, Sonny Chandra, S.TP, Satria Surya Wijaya, Pieter Antonius Saputra, S.TP, Kenny Mitchell Gandi, Anthony Rusli, Yunita Kusuma Dewi for the help and support given to the author while conducting the research and finishing the thesis.

10) Benardo, S.TP, Silven Parlina, S.TP, Victoria Budiman, S.TP, Yessica Hartanto, S.TP, Fifi Thiofanny, S.TP and other seniors in Food Technology Department for the experiences shared to the author.

11) All lecturers and staff of the UPH Food Technology Department for the help given to the author during the research and thesis completion.

The author realizes the imperfection of this report so the author looks forward for any critics and suggestions from the readers. Finally, the author wishes that this report will be useful for the readers.

Karawaci, August 2014

LIST OF APPENDICES ................................................................................... xiv

CHAPTER I INTRODUCTION
1.1 Background ....................................................................................................... 1
1.2 Research Problem .............................................................................................. 3
1.3 Objectives .......................................................................................................... 3
  1.3.1 General Objectives .................................................................................... 3
  1.3.2 Specific Objectives .................................................................................... 3

CHAPTER II LITERATURE REVIEW
2.1 Rambutan .......................................................................................................... 5
  2.1.1 Rambutan Peel ........................................................................................... 6
2.2 Extraction .......................................................................................................... 8
2.3 Chromatography ............................................................................................... 9
  2.3.1 Thin Layer Chromatography ..................................................................... 9
  2.3.2 Column Chromatography ........................................................................ 10
  2.3.3 Liquid Chromatography-Mass Spectrometry .......................................... 11
2.4 Cider ................................................................................................................ 12
2.5 Fermentation Inhibitor ........................................................................................................ 13

CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment .................................................................................................. 14

3.2 Research Stages .............................................................................................................. 14

3.2.1 Research Stage I ....................................................................................................... 15

3.2.2 Research Stage II .................................................................................................... 16

3.3 Experimental Design .................................................................................................... 18

3.4 Methods of Analysis ..................................................................................................... 21

3.4.1 Moisture Content using the Oven Method (AOAC, 2005) ....................................... 21

3.4.2 Yield Determination (Wang et al., 2011) ................................................................. 21

3.4.3 pH Determination (AOAC, 2005) ........................................................................... 21

3.4.4 Total Titratable Acid Content (Downes and Ito, 2001) ..................................... 22

3.4.5 Total Dissolved Solids (Vazques and Mueller, no year) ........................................... 22

3.4.6 Alcohol Content (Palmer, 2001) ............................................................................. 22

3.4.6 Reducing Sugar Content (Thobunleupop, 2008) ...................................................... 24

3.4.7 Total Yeast Count (Downes and Ito, 2001) .............................................................. 25

3.4.8 Liquid Chromatography-Mass Spectrophotometry .................................................. 25

CHAPTER IV RESULTS AND DISCUSSION

4.1 Taxonomical Verification of Rambutan Species and Extraction Yield ..................... 27

4.2 Fractionation of Rambutan Peel Extract ..................................................................... 28

4.2.1 Fractionation of Rambutan Peel Extract using Thin Layer Chromatography ........ 28

4.2.2 Fractionation of Rambutan Peel Extract using Column Chromatography .......... 29

4.3 Physicochemical Properties of Cider ......................................................................... 30

4.3.1 pH ......................................................................................................................... 31

4.3.2 Total Titratable Acid ............................................................................................. 33

4.3.3 Total Dissolved Solid ........................................................................................... 35

4.3.4 Total Reducing Sugar ............................................................................................ 38

4.3.5 Alcohol Content ................................................................................................... 41

4.3.6 Total Yeast Count of Cider .................................................................................. 44
