ACKNOWLEDGEMENTS

This thesis was written as one of requirements to obtain the degree in Sarjana Strata Satu Teknologi Pangan. The title of this thesis is “Formulation of Legumes Milk-Pumpkin Juice” Based on The Optimization of Vitamin A and Its Sensory Quality”. The writer would express the greatest gratitude to God, for His continuous blessings. However, this thesis would not be completed on time without the help and support from many people. The writer wants to express her gratitude to:

1) Prof. Dr. Ir. C. Hanny Wijaya, M. Agr, as the thesis supervisor who give her time, efforts and patience to guide, help and supports the writer during the completion of this thesis.

2) Ms. Lisa Amanda Yakhin M.Eng as the thesis co-supervisor who has given her greatest help, support, and guidance for the writer for the completion of this thesis.

3) Ms. Julia Ratna Wijaya, MappSc. as the Head of Food Technology Department, Universitas Pelita Harapan who has given the chance for this research to be done.

4) Mrs. Sisi Patricia Lolita Gultom M.Eng, as the vice head of Food Technology Department for the support and advice for the writer for the past 4 years.

5) Mrs. Nathania, Mr. Jeremia Manuel Halim, Mrs. Melanie, Mr. Adolf, and Ms. Ratna Handayani who have given the opportunity for the writer to conduct the research in the laboratories.

6) My beloved parents (Rudy Tjokrodiredjo and Marlianti) and beloved sister (Nathania Tjokrodiredjo) for their support and prayer during the research and during the writing of this thesis until the completion.

7) Mr. Adzie, Mr. Hendra, Mrs. Meri, Mr. Yos, Mr. Darius and Ms. Rachel who have given their helps and supports for the writer during the work in the laboratories.
8) My fellow friends Ellyn, Yunita Kusuma Dewi, Irene Astria, Chiara Wijaya, Veliana, William Pratama, Stivan Effendi and Felix Surjadi who has given their supports and accompaniments during the research and writing of this thesis.

9) My great friends Angela Indryana, Elviana Yaputra and Reinita Cahya Yugana for their continuous support, help and prayer.

10) My highschool best friends, Natasha Tjahjadi, Maria Debora Niken, Jessica Devina, Deviana Steffanie, Glenda Sogo, and Mario Eri for their continuous support and prayer.

11) All of my friends in Food Technology Department Universitas Pelita Harapan.

12) People who cannot be mentioned one by one.

The writer realizes that this thesis is far from perfect, so the writer welcomes to every comments and suggestions that can help the writer to improve report writing in the future. The writer hopes their paper would give useful information to the people who read it.

## CHAPTER I INTRODUCTION

1.1 Background ........................................................................................................ 1
1.2 Research Problem ............................................................................................ 2
1.3 Objective ........................................................................................................... 3
  1.3.1 General Objective ................................................................................... 3
  1.3.2 Specific Objective ................................................................................... 3

## CHAPTER II LITERATURE REVIEW

2.1 Non-dairy milk .................................................................................................. 4
2.2 Winged Bean ................................................................................................... 7
2.3 Jack Bean ......................................................................................................... 8
2.4 Soybean ........................................................................................................... 10
2.5 Pumpkin ........................................................................................................... 11
2.6 Elimination of Undesirable Compounds ......................................................... 12
CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipments ................................................................. 16

3.2 Research Stages .............................................................................. 17
  3.2.1 Ingredient Preparation ............................................................. 17
  3.2.2 Main Research ........................................................................... 19
    3.2.2.1 Ingredient proportion determination ................................... 19
    3.2.2.2 Verification Test of Mixture Experiment Result .................. 20
    3.2.2.3 Product Characterization .................................................... 21

3.3 Experimental Design ...................................................................... 21

3.4 Analysis ............................................................................................ 23
  3.4.1 Sensory Analysis ....................................................................... 23
    3.4.1.1 Intensity Analysis by Scoring Test (Clark et al., 2009) ........ 23
    3.4.1.2 Hedonic analysis (Meilgaard et al., 2007) ....................... 23
  3.4.2 Moisture Content and Total Solid (AOAC, 2005 with modification) 24
  3.4.3 Ash Content (AOAC, 2005 with modification) .......................... 24
  3.4.4 Protein Analysis (AOAC, 2005 and CODEX, 1999) ................... 24
  3.4.5 Fat Analysis (AOAC, 2005 with modification) .......................... 25
  3.4.6 Carbohydrate analysis (AOAC, 2005) ........................................ 26
  3.4.7 Carotenoid Analysis (Yang et al., 1998) ..................................... 26
  3.4.8 pH Analysis ............................................................................... 26
  3.4.9 Total Dissolved Solid (TDS) Analysis ........................................ 27
  3.4.10 Viscosity Analysis ................................................................. 27
  3.4.11 Stability Analysis ..................................................................... 27
    3.4.11.1 Phase Separation Analysis (Lini, 2010 in Trisnawati et al., 2012) ...................................................... 27
    3.4.11.2 Fat Globule Size Analysis (Nikzade et al., 2012) ............... 27
  3.4.12 Color Analysis .......................................................................... 28
  3.4.14 Coliform Analysis Analysis (Liamngee et al., 2013) ............... 28
CHAPTER IV RESULT AND DISCUSSION

4.1 Ingredients .............................................................................................................. 29

4.2 Main Research ........................................................................................................ 32

4.2.1 Optimization ...................................................................................................... 34

4.2.1.1 Optimization parameter .............................................................................. 39

4.2.1.2 Verification Test of Legumes Milk Pumpkin Juice Product .................... 42

4.3 Characterisation of Selected Formula ................................................................. 43

4.3.1 Nutrient Content .............................................................................................. 43

4.3.2 Microbiology .................................................................................................... 45

4.3.3 Physicochemical Properties ............................................................................. 46

4.3.3.1 Viscosity ..................................................................................................... 46

4.3.3.2 Stability ....................................................................................................... 47

4.3.3.3 Color .......................................................................................................... 50

4.4 Best Formulation of legumes milk pumpkin juice ............................................ 52

CHAPTER V CONCLUSION AND SUGGESTION

5.1 Conclusion ............................................................................................................. 54

5.2 Suggestion ............................................................................................................. 55

BIBLIOGRAPHY ........................................................................................................ 56

APPENDICES ............................................................................................................ 61
Table 2.1 Nutrient Standard for Dairy Milk and Non-Dairy Milk per 100 g...........5
Tabel 2.2 Standard for soy milk and soy milk beverage............................................6
Table 2.3 Nutrient content of Winged Bean .............................................................7
Table 2.4 Nutrient content of Soybean .....................................................................10
Table 2.5 Nutrient composition of pumpkin.........................................................11
Table 3.1 Constraint in d-optimal design for legume milk pumpkin juice beverage .................................................................................................................22
Table 3.2 D-optimal design for mixture for legume milk pumpkin juice beverage ..........................................................................................22
Table 4.1 Analysis result on soy milk, winged bean milk, jack bean milk and pumpkin juice ..................................................................................................31
Table 4.2 Formula resulted from mixture experiment and responses from scoring and hedonic value .....................................................................................33
Table 4.3 Result of ANOVA model of each response in formula optimization ..............................................................................................................................34
Table 4.4 Setting of parameter to obtain best formulation in d-optimal mixture design of legume milk based pumpkin juice beverage .............................39
Table 4.5 Top three formulation and its estimated hedonic and scoring value.....41
Table 4.6 Verification result of selected formula compared to prediction result, 95% CI and 95% PI..........................................................42
Table 4.7 Proximate of final product with 3 best formulation..................................................44
Table 4.8 Microbiological analysis result of final product with best formulation .............................................................................................................45
Table 4.9 Physico-chemical properties of final product with best formulation ..................................................................................................................46
Table 4.10 Fat globule size over time .......................................................................49
Table 4.11 CIE L* a* b* result of final product with different formulation ..........52
LIST OF FIGURES

Figure 3.1 Flowchart of legume milk making........................................................ 18
Figure 3.2 Flowchart of pumpkin juice making ..................................................... 19
Figure 3.3 Flowchart of research stage II............................................................... 20
Figure 4.1 Jack bean, winged bean, and soybean before and after treatment.......29
Figure 4.2 Soy milk, winged bean milk, jack bean milk and its okara...............30
Figure 4.3 Surface model response of scoring aroma............................................36
Figure 4.4 Surface model response of degree of hedonic aroma .........................36
Figure 4.5 Surface model response of degree of scoring viscosity.......................38
Figure 4.6 Ratio phase separation / total volume in stability analysis over time of the final product with the best formulation.................................48
Figure 4.7 The changing of fat globule size over time of the final product with the best formulation .............................................................49
Figure 4.8 Formulation B during 0 hours of storage under microscope with 1000x magnification ..................................................................50
Figure 4.9 Formulation B during 170 hours of storage under microscope with 1000x magnification .................................................................50
Figure 4.10 The changing in redness within storage time of the final product with the best formulation ...............................................................51
LIST OF APPENDICES

Appendix A. Scoring and Hedonic Questionnaire
Appendix B. MPN Table Conversion
Appendix C. Confirmation letter of identification of ingredient
Appendix D. Calculation
Appendix E. Nutrient analysis result of ingredient
Appendix F. Hedonic Beany Flavor
Appendix G. Scoring Result
Appendix H. Hedonic Test Result
Appendix I. ANOVA table of Mixture Design
Appendix J. Verification Test Result
Appendix K. Protein Content
Appendix L. Fat Content
Appendix M. Total Carotenoid Content
Appendix N. Ash Content
Appendix O. Carbohydrate Content
Appendix P. Moisture Content
Appendix Q. Microbiology Content
Appendix R. Viscosity
Appendix S. Total Solid (TS)
Appendix T. Total Dissolved Solid (TDS) Content
Appendix U. pH
Appendix V. Phase Separation
Appendix W. Fat Globule
Appendix X. Color
