ACKNOWLEDGEMENTS

Thanks to God, because of His blessing the author can finished this thesis entitled “CHARACTERISTICS AND ANTIOXIDANT ACTIVITY OF CURCUMINOIDS-NANOEMULSION FROM TURMERIC (Curcuma longa L.) AND THE APPLICATION IN KUNYIT ASAM DRINK” that is written as partial fulfillment of the academic requirements to obtain the degree of Sarjana Teknologi Pertanian Strata Satu Food Technology, Universitas Pelita Harapan.

Support, guidance, and Prayer from many parties are received abundantly during the laboratory experiment and completion of this report, and therefore deserve mentions of gratitude. In this occasion, the author would like to give the highest appreciation to:

1. Prof. Dr. Manlian Ronald A. Simanjuntak, ST., MT., D. Min. as dean of Faculty Science and Technology.
2. Ir. W. Donald R. Pokatong, M.Sc., Ph.D. as Head of Food Technology Study Program of UPH and Academic Adviser, for giving a chance to write and finish my thesis.
3. Ir. A. Herry Cahyana, Ph.D. as thesis supervisor, for patiently guide, motivate and give useful advice from topic selection to thesis completion.
4. Dr. Ir. Melanie Cornelia, MT. as thesis defense examiner and Yuniwaty Halim, M.Sc. as Head of Quality Control and Research Laboratory and thesis defense examiner who give many useful advices for the thesis completion.
5. Dr. Tagor M. Siregar, M.Si., Natania, M.Eng and Dr. Adolf J. N. Parhusip as Head of Laboratories (chemistry, food processing laboratory, and
microbiology laboratory respectively) where the author conducts the final project.

6. Mr. Mateus Andra Gunawan for the patient and abundant help for looking after “Tim Curcumin”.

7. Ms. Virly, Mr. Darius, Mr. Hendra, Mr. Aji and Mr. Yos for the enormous help at the laboratories.

8. All lecturers of Food Technology Study Program who teach the author during studying at Universitas Pelita Harapan.

9. Jans B. Tanasal and Susanti as beloved parents, Aju Tanasal as beloved auntie, Giavanni Tanasal and Sharon Tanasal as beloved and annoying sister, Budiaman Tanasal and Lim Lina as beloved grandparents, and all of my family for raising the author, invaluable supports, prays, and comfort during thesis day and completion of report.

10. “Tim Curcumin” – Callista Trixie, Livia, Septiana, Tamara Tanoto, and Winnie Dorothy as thesis partners who always accompany, give support, help, and comfort during the thesis days.

11. Alvin Hartanto for the supports, console, and understanding during hard times in thesis days.

13. Cely Hoesada as beloved mentor and Shelly Chandra as beloved senior who always support me and giving advice during my hard time.
14. Melita Paramita as report working partner for the endless support and informative sharing.

15. Agnes Monica, Claudia Anastasia, Elika Margareth and Stefani Martchellia as best friends from high school for much support and comfort from far away.

16. Dennis Hotman and Marisa Andreina as best friends from high school and Universitas Indonesia who help the author to arrive safely and guide the author in Universitas Indonesia.

17. All members of Class C, Food Technology for the informative sharing and discussions shared together.

18. All family, friends and colleagues who cannot be mentioned one by one and contribute to the completion of the thesis report.

   The author realize that this report is far from excellence and has room to be improved, therefore any suggestions are very welcomed for better improvement. Last but not least, the author hopes this report can be useful and informative for the readers.

Tangerang, January 2017

ABSTRACT........................................................................................................ iv
ACKNOWLEDGEMENTS ................................................................................ vi
TABLE OF CONTENTS .................................................................................. ix
LIST OF TABLES .......................................................................................... xiii
LIST OF FIGURES ......................................................................................... xiv
LIST OF APPENDICES ................................................................................ xvi

## CHAPTER I INTRODUCTION
1.1 Background............................................................................................ 1
1.2 Research Problem .................................................................................. 3
1.3 Objectives ............................................................................................... 3
  1.3.1 General Objectives ......................................................................... 3
  1.3.2 Specific Objectives ......................................................................... 3

## CHAPTER II LITERATURE REVIEW
2.1 Turmeric................................................................................................ 5
2.2 Curcuminoids......................................................................................... 7
  2.2.1 Curcumin......................................................................................... 7
2.3 Nanoemulsion ....................................................................................... 10
  2.3.1 Physical and Physicochemical Properties of Nanoemulsion ........... 10
  2.3.2 Formation of Nanoemulsion ......................................................... 11
  2.3.3 Ingredients of Nanoemulsion ........................................................ 11
    2.3.3.1 Fat and Oils ......................................................................... 11
    2.3.3.2 Surfactant ........................................................................... 12
a. Tween-80 ................................................................. 13
b. Polyethylene Glycol 400 ......................................... 13

2.3.4 Advantages of Nanoemulsion ........................................ 14
2.3.5 Instability of Nanoemulsion ........................................ 14

2.4 Jamu ............................................................................ 16
2.5 Antioxidant ............................................................... 17

CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment ............................................... 20
3.2 Research Procedures .................................................... 21
   3.2.1 Preparation of Stage I ............................................... 21
   3.2.2 Research Stage I ..................................................... 22
   3.2.3 Research Stage II .................................................... 23
3.3 Experimental Design ..................................................... 25
   3.3.1 Research Stage I ..................................................... 25
      3.3.1.1 Determination of The Chosen Nanoemulsion Formulation ..................................................... 25
      3.3.1.2 Comparison of Curcuminoids with Curcuminoids Nanoemulsion Characteristic .................... 27
   3.3.2 Research Stage II .................................................... 28
      3.3.2.1 The Chosen Kunyit Asam Drink Formulation ................................................................. 28
      3.3.2.2 Comparison of kunyit asam drink control and the chosen formulation kunyit asam drink ...... 29
3.4 Analysis Procedures ...................................................... 30
   3.4.1 Droplet Size and Distribution of Particle (Dobrucka and Dugaszewska, 2015) ..................... 30
   3.4.2 Solubility (Anuchapreeda, et al., 2012 with modification) .................................................. 30
   3.4.3 Antioxidant Activity (Nahak and Sahu, 2011 with modification) ..................................... 31
   3.4.4 Viscosity (Ali, et al., 2014 with modification) ................................................................. 32
   3.4.5 Turbidity (Ghosh, et al., 2013) ........................................ 32
   3.4.6 Stability (Ghosh, et al., 2013 with modification) .......................................................... 32
   3.4.7 Extraction Yield (AOAC, 2005) ........................................ 32
   3.4.8 Moisture Content (AOAC, 2005) ..................
CHAPTER IV RESULTS AND DISCUSSIONS

4.1 Extraction of curcuminoids ................................................................. 35
  4.1.1 UV-Vis absorption of curcuminoids .............................................. 36
  4.1.2 Thin Layer Chromatography ....................................................... 37
  4.1.3 Antioxidant Activity of Curcuminoids .......................................... 38
  4.1.4 Solubility of Curcuminoids in Water ........................................ 39

4.2 Formation of Curcuminoids Nanoemulsion ........................................ 40
  4.2.1 Droplet Sizes and Polydispersity Index Analysis .......................... 41
  4.2.2 Free Radical Scavenging Activity of Nanoemulsions .................... 43
  4.2.3 Solubility of Curcuminoids in Nanoemulsions .............................. 45
  4.2.4 Stability of Nanoemulsions ...................................................... 46
  4.2.5 Viscosity of Nanoemulsions ..................................................... 47
  4.2.6 Turbidity of Nanoemulsions ..................................................... 49
  4.2.7 The Chosen Nanoemulsions Formulation ..................................... 50
    4.2.7.1 Zeta Potential Analysis ...................................................... 50

4.3 Comparison between Curcuminoids and Curcuminoids Nanoemulsion ... 51
  4.3.1 Solubility of Curcuminoids in Water and Nanoemulsion ............... 51
  4.3.2 Free Radical Scavenging Activity of Curcuminoids and Curcuminoids Nanoemulsions ................................................................. 52

4.4 The Making of Kunyit Asam Drink .................................................. 53
  4.4.1 Free Radical Scavenging Activity of Kunyit Asam Drink ............... 53
  4.4.2 Viscosity of Kunyit Asam Drink ................................................ 55
  4.4.3 Color of Kunyit Asam Drink ..................................................... 56
4.4.4 Effect of Different Curcuminoids Nanoemulsion Concentration to Sensory Parameter .................................................................57

4.4.4.1 Color ..........................................................................................57

4.4.4.2 Aroma ..........................................................................................58

4.4.4.3 Taste .............................................................................................60

4.4.4.4 Consistency .....................................................................................61

4.4.4.5 Overall ..........................................................................................63

4.4.5 The Chosen Formulation of Kunyit Asam Drink ............................63

CHAPTER V CONCLUSION AND SUGGESTION

5.1. Conclusions ......................................................................................66

5.2. Suggestions .....................................................................................67

BIBLIOGRAPHY .......................................................................................68

APPENDICES ............................................................................................76
