ACKNOWLEDGEMENTS

First of all, author would like to thank and praise God for His blessings and guidance that had helped the author in finishing this final project about “COMPARISON OF AROMA ACTIVE COMPOUNDS IN PISANG MAS (Musa acuminata), PISANG KEPOK (Musa paradisiaca), AND PISANG BATU (Musa balbisiana)”. This final project was conducted as one of the compulsory programs for acquiring the bachelor degree in Food Technology Department of Universitas Pelita Harapan.

The author realizes that this final project and its report could not be accomplished without help, guidance, supports, and prayers from many people. Therefore in this opportunity, author would like to thank the people who had been involved in this final project and the completion of it as follows:

1) Prof. Dr. C. Hanny Wijaya as the supervisor of this final project for her kind guidance, support, and wide access for the importance of this research since the beginning of this final project until the completion of this report

2) Jeremia Manuel Halim, MP as the co-supervisor of this final project who was professionally and thoroughly guided and helped the author since the beginning of this final project until the completion of this report.

3) Julia Ratna Wijaya, MAppSc as the Head of Food Technology Department for being a great Head of this department

4) All of the UPH lecturers that have given author a lot of knowledge

5) All of the UPH staffs that have helped author from the beginning of lecture

6) International Flavors & Fragrances (IFF) for its help in giving author some flavor chemical standards
7) Flavor laboratory of Indonesian Center for Rice Research for letting author use the GC-MS and GC-O in there

8) Author beloved family consists of father (Effendi), mother (Susilawaty), and older brother (Steven) for giving author care, support, and prayer all the time

9) Sumitomo, Stanley Lucardi, and Joni Indra for their helping and support during the final project

10) All of food technology 2010 students who had passed the same experience and helped each other from the beginning

11) All people who had helped the author that cannot be mentioned one by one during the final project and report completion

The author realizes that this research and report are not perfect and tries to write the report as best as he can and would like to apologize if there are some mistakes or mistype in this report. Author appreciates the readers’ concerns and suggestion towards this report. At last, author hopes this report can be useful for the readers. Thank you very much.

Karawaci, August 2014

## COVER

STATEMENT OF THESIS AUTHENTICITY

APPROVAL BY THESIS SUPERVISORS

APPROVAL BY THESIS EXAMINATION COMMITTEE

ABSTRACT ........................................................................................................ i

ACKNOWLEDGEMENTS ............................................................................... ii

TABLE OF CONTENT .................................................................................... iv

LIST OF TABLES ............................................................................................ vi

LIST OF FIGURES ......................................................................................... vii

LIST OF APPENDICES ................................................................................. viii

## CHAPTER I - INTRODUCTION

1.1 Background ................................................................................................ 1

1.2 Research Problem ....................................................................................... 2

1.3 Objectives .................................................................................................. 3

1.3.1 General Objectives ............................................................................... 3

1.3.2 Specific Objectives .............................................................................. 3

## CHAPTER II - LITERATURE REVIEW

2.1 Flavor Characteristic of Fruits ................................................................. 4

2.2 Banana .......................................................................................................

2.2.1 *Pisang Mas* .......................................................................................... 6

2.2.2 *Pisang Kepok* ....................................................................................... 7

2.2.3 *Pisang Batu* .......................................................................................... 8

2.3 Analysis of Flavor ...................................................................................... 8

2.3.1 Instrumental Analysis ........................................................................... 9

2.3.2 Sensory Analysis ................................................................................ 13

2.4 Principal Component Analysis (PCA) ....................................................... 14

## CHAPTER III - RESEARCH METHODOLOGY

3.1 Materials and Equipments ........................................................................ 16
3.2 Research Procedure .................................................................................. 17
  3.2.1 Flavor Compounds Determination by Using GC-MS-O……………….. 17
  3.2.2 Sensory Determination ..................................................................... 18

CHAPTER IV RESULT AND DISCUSSION
  4.1 Banana Volatiles................................................................................... 23
  4.2 Banana Aroma Active Compounds ....................................................... 32
  4.3 Sensory Profiles of Banana Flavor....................................................... 35
  4.4. Preference of Banana Flavor................................................................. 39

CHAPTER V - CONCLUSION AND SUGGESTIONS
  5.1 Conclusions.......................................................................................... 43
  5.2 Suggestions .......................................................................................... 44

BIBLIOGRAPHY............................................................................................. 45
APPENDICES................................................................................................. 49
LIST OF TABLES

Table 2.1 Composition of banana fruit ................................................................. 5
Table 2.2 Odor-active compounds in banana ........................................................ 6
Table 3.1 Set for basic taste test ........................................................................... 20
Table 3.2 Set for triangle test ................................................................................ 20
Table 3.3 Description of activities during training sessions .............................. 21
Table 4.1 Volatiles in pisang mas....................................................................... 28
Table 4.2 Volatiles in pisang kepok. ................................................................. 29
Table 4.3 Volatiles in pisang batu................................................................. 29
Table 4.4 Volatiles identified in pisang mas, pisang kepok, and pisang batu ..... 30
Table 4.5 Gas Chromatography – Olfactometry result for aroma active compound .................................................................................................................. 33
