ACKNOWLEDGEMENTS

Foremost, the author thanks Lord Jesus for His endless blessings and guidance in the completion of this thesis entitled “UTILIZATION OF OKRA (Abelmoschus esculentus) SEED AS COFFEE SUBSTITUTE TO LOWER CAFFEINE CONTENT OF COFFEE DRINKS”. This thesis was written as partial fulfillment of the academic requirement to obtain the degree of Sarjana Teknologi Pertanian Strata Satu, Food Technology Study Program, Faculty of Science and Technology, Universitas Pelita Harapan, Tangerang.

The author realizes that this thesis would not be possible to be completed well and in time without the guidance, assistance, prayers and supports from many parties. Therefore the author would like to express gratitude towards those who have helped and supported throughout the completion of this final project, including:

1. Prof. Dr. Manlian Ronald A. Simanjuntak, ST., MT., D. Min., Dean of Faculty of Science and Technology for support and input during university years in Universitas Pelita Harapan.

2. Ir. W. Donald R. Pokatong, M.Sc., Ph.D., Head of Food Technology Study Program for supporting the author during thesis period, and as examiner for useful suggestions regarding thesis revisions.

3. Lisa A. Yakhin, M.Eng., as the Thesis Supervisor for the time, patience, guidance, helps, efforts, advices, and support throughout the thesis completion.
4. Natania, M.Eng, Head of Food Processing Laboratory for allowing the author to conduct research in the laboratory, and as examiner for useful inputs regarding revisions.

5. Jeremia Manuel Halim, MP, as former academic supervisor and Yuniwaty Halim, MSc, Head of Quality Control and Food Research Laboratory and as current academic advisor for allowing the author to conduct research in the laboratory and guidance, support and help during academic years in Food Technology Study Program.

6. Ratna Handayani, MP, Deputy Head of Food Technology Study Program for the support during thesis completion.

7. Dr. Adolf Parhusip as Head of Microbiology Laboratory and Dr. Tagor M. Siregar as Head of Chemistry Laboratory for allowing the author to conduct research for final project in the laboratories.

8. Muhammad Faudzie, S.E., Darius Wulakada, Suhendra, Yosafat Rudju, Mateus Andra Gunawan, STP, and Virly, STP as laboratory assistants for the information, support and help throughout laboratory works.

10. All other lecturers and staffs in Food Technology Study Program for the support and help throughout the period of study.

11. Beloved family, Deniar C. Effendi (father), Listari Latif (mother), and Frances Marcellina (sister) for the endless support, courage, help and prayers throughout the thesis completion.
12. Celia Darleen, Isha Kumalasari, Nathania Natawijaya, and Nike Pernama, as fellow thesis mates under the same supervision for the time, joy, laughter, and hardships shared, and support during the thesis period.

13. Caecilia Leenardi, Charles Lee, Christopher I Rimba, Claudia Oktavianus, Eric Hutama, Gerardo Kevin Liguna, Isha Kumalasari, Lisa Angereni, Meilina Anastasia, Nathania Natawijaya, Olivia Virginia, Rani Pasau, Raymond Winoto, Revina Tjahja, and Septiana for the time, help, and effort to be part of the research as trained panelists.

14. Celia Darleen, Claudia Severesia, Evelyn, Jessica Decyree, Melita Paramita, Lisa Angereni, Sianny Priskila, and Yulia Tendean for sharing the joy, tears, support and experience during the research.

15. All students from Food Technology 2013, particularly Class C for the support and togetherness for 3.5 years.

16. All other relatives, friends, and colleagues who are not specifically mentioned, but have helped and supported the author.

The author realizes that this thesis is far beyond perfection and requires improvements. Therefore, the author is more than pleased to accept any criticism and suggestion. Finally, the author hopes that this report may be useful to the readers. Thank you.

Tangerang, February 2017

## CHAPTER I INTRODUCTION

1.1 Background .......................................................... 1
1.2 Research problem .................................................. 3
1.3 Objectives ................................................................... 4
    1.3.1 General objectives .................................................. 4
    1.3.2 Specific objectives .................................................. 4

## CHAPTER II LITERATURE REVIEW

2.1 Okra ............................................................................ 5
2.2 Coffee ........................................................................ 6
    2.2.1 Coffee Composition ............................................... 7
    2.2.2 Coffee Processing .................................................... 7
        2.2.2.1 Harvesting and Processing ................................. 8
        2.2.2.2 Roasting .......................................................... 8
        2.2.2.3 Grinding .......................................................... 9
        2.2.2.4 Decaffeination .................................................. 10
        2.2.2.5 Brewing .......................................................... 10

ix
CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment ................................................................. 23
3.2 Research Methodology ................................................................. 24
  3.2.1 Research Stage I ................................................................. 24
    3.2.1.1 Making of Brewed Okra Seed Powder ................................ 24
    3.2.1.2 Research Stage I Experimental Design .............................. 26
  3.2.2 Research Stage II ................................................................. 28
    3.2.2.1 Making of Okra Seed Coffee Substitute ......................... 28
    3.2.2.2 Research Stage II Experimental Design ......................... 30
3.3 Method of Analysis ........................................................................ 32
  3.3.1 Particle Size Distribution (Gore, 1991 with modification) ....... 32
  3.3.2 Moisture Content by Oven Method (AOAC, 2005) ................... 32
  3.3.3 Ash Content (AOAC, 2005) ......................................................... 33
  3.3.4 Aqueous Extract Determination (ISI, 2005) .......................... 33
  3.3.5 Caffeine Content (Al-Hitti & Ibrahim, 2009) ....................... 34
  3.3.6 pH (AOAC, 2005) .................................................................. 35
  3.3.7 Chroma Meter Color Analysis (Jouki & Khazaei, 2012) .......... 35
  3.3.8 Yield ......................................................................................... 35
  3.3.9 Protein Content (AOAC, 2005) .............................................. 36
  3.3.10 Fat Content (BSN, 1992) ......................................................... 37
3.3.11 Sensory Analysis (ASTM, 1981; Meilgaard, Civille & Carr, 2007) ........................................................................................................ 37
3.3.11.1 Panelist Screening (ASTM, 1981) ................................................. 38
3.3.11.2 Panelist Training (ASTM, 1981) ..................................................... 39
3.3.11.3 Quantitative Descriptive Analysis (QDA) (ASTM, 1981) ................. 40

CHAPTER IV RESULTS AND DISCUSSION
4.1 Physicochemical Properties .................................................................. 42
  4.1.1 Particle Size Distribution .................................................................. 42
  4.1.2 Moisture Content and Yield ............................................................... 43
  4.1.3 Ash Content ....................................................................................... 44
  4.1.4 Aqueous Extract ............................................................................... 44
  4.1.5 Caffeine Content .............................................................................. 45
  4.1.6 pH ..................................................................................................... 46
  4.1.7 Chromameter Color Analysis ........................................................... 47
4.2 Sensory Properties .................................................................................. 49
  4.2.1 Color .................................................................................................. 50
  4.2.2 Aroma ............................................................................................... 53
  4.2.3 Flavor ................................................................................................ 62
  4.2.4 Acidity .............................................................................................. 66
  4.2.5 Sweetness ........................................................................................ 68
  4.2.6 Balance ............................................................................................. 69
  4.2.7 Body ................................................................................................ 70
  4.2.8 Aftertaste ........................................................................................ 72
4.3 Coffee and Roasted Okra Seed Powder Selection ..................................... 73
4.4 Research Stage II .................................................................................... 76
  4.4.1 Physicochemical Properties ............................................................... 77
  4.4.1.1 pH ................................................................................................ 77
  4.4.1.2 Chromameter Color Analysis ...................................................... 78
4.4.2 Sensory Properties ............................................................................. 80
  4.4.2.1 Color .............................................................................................. 80
  4.4.2.2 Aroma ........................................................................................... 81
4.4.2.3 Flavor ......................................................................................... 89
4.4.2.4 Acidity ......................................................................................... 94
4.4.2.5 Sweetness ..................................................................................... 95
4.4.2.6 Balance ......................................................................................... 96
4.4.2.7 Body ............................................................................................ 97
4.4.2.8 Aftertaste ..................................................................................... 98

CHAPTER V CONCLUSIONS AND SUGGESTIONS
5.1 Conclusions ..................................................................................... 101
5.2 Suggestions ....................................................................................... 102
