Highest gratitude is expressed by the author, for God’s blessings in allowing the author to complete this thesis, which entitled “OPTIMIZATION OF WHEAT (Triticum spp.), SORGHUM (Sorghum bicolor) AND MUNGBEAN (Vigna radiata) FLOUR COMPOSITION ON BISCUIT QUALITY”. This thesis was made to fulfill the academic requirement to achieve the Sarjana Teknologi Pertanian Strata Satu degree in Food Technology Department. This thesis would have never been completed without the help of many people. Hence, the author would like to express her gratitude, especially for:

1) Dr. Ir. Raffi Paramawati, MSi, as thesis supervisor who had given lots of supports, helps, assistances, advices and encouragements during the research and completion of thesis.

2) Mr. Jeremia Manuel Halim, MP, as thesis co-supervisor who had given time, guidance, advices and supports for the author to conduct the research and to complete the thesis.

3) Ms. Julia Ratna Wijaya, MAppSc, as Head of Food Technology Department who had given the chance for the author to do research and to complete the thesis.

4) Mrs. Sisi Patricia A. Gultom, as Vice Head of Food Technology Department who had given supports for the author to complete the thesis.

5) Mrs. Natania, Mr. Jeremia Manuel Halim, Mrs. Melanie Cornelia, Mrs. Ratna Handayani and Mrs. Sisi Patricia A. Gultom for the opportunity to conduct the research in laboratories.
6) Dearest Father (Kukhu Pranata, Lay), Mother (Christine, Tjong), Brother (Vincentius Andrew Pranata) and Sister (Florence Audina) for giving financial supports, strengths, encouragements, advises and prayers for author in conducting research and completing the thesis.

7) Grace Liesar, Elizabeth Kurniadi, Nasya Jessica, Adeline Pannadhika, Maya Amelia Sulaksono, Debby Novianty, Vanessa Jasmine, Michelle Angela, Yosephine Erhan, Grescellia and all members of Food Technology class C 2011 for the prayers, supports, encouragements and accompaniments during the research.

8) Aditya Dharma and Elviana Yaputra for sharing their experiences in conducting research and completing the thesis.

9) Mr. Adzie, Mr. Hendra, Mrs. Meri, Ms. Rachel and Mr. Darius for the assistances during the research in the laboratories.

   The author realizes that the thesis is far from perfect and that the author may have done inappropriate actions that are not purposely done during the research and the completion of thesis. Therefore, the author would like to apologies and would be very glad to receive comments and suggestions regarding the thesis. In short, the author hopes that the thesis may be beneficial for all the readers.

ABSTRACT ............................................................................................................ v  
ACKNOWLEDGMENT ..............................................................................................vi  
TABLE OF CONTENT .............................................................................................. viii  
LIST OF FIGURES ................................................................................................... xi  
LIST OF TABLES .................................................................................................... xii  
LIST OF APPENDICES ........................................................................................... xiii  

CHAPTER I INTRODUCTION 

1.1 Background ......................................................................................................... 1  
1.2 Research Problem ................................................................................................ 3  
1.3 Objectives ............................................................................................................. 3  
1.3.1 General Objectives ........................................................................................... 4  
1.3.2 Specific Objectives ............................................................................................ 4  

CHAPTER II LITERATURE REVIEW 

2.1 Biscuit .................................................................................................................... 5  
2.2 Ingredients and Procedure of Making Biscuit ....................................................... 6  
2.2.1 Ingredients of Biscuit ....................................................................................... 6  
2.2.2 Procedure of Making Biscuit ........................................................................... 13  
2.3 Wheat .................................................................................................................. 15  
2.4 Sorghum .............................................................................................................. 17  
2.4.1 Characteristics of Sorghum ............................................................................. 17
2.4.2 Sorghum Utilization in Food Industry .............................................22

2.5 Mungbean ..................................................................................................................24

2.5.1 Characteristic of Mungbean ........................................................................24

2.5.2 Utilization of Mungbean in Food Industry .............................................27

2.6 Fats ................................................................................................................................28

2.6.1 Margarine .............................................................................................................28

2.6.2 Shortening .............................................................................................................29

2.6.3 Vegetable Oil .........................................................................................................29

2.7 Determination of Optimum Composition with Mixture Experiment.....30

CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipments.............................................................................33

3.2 Research Procedures .........................................................................................34

3.2.1 Preliminary Research ................................................................................34

3.2.2 Main Research .............................................................................................36

3.3 Experimental Design .........................................................................................39

3.3.1 Preliminary Research ................................................................................39

3.3.2 Main Research .............................................................................................40

3.4 Analysis Procedures ..........................................................................................41

3.4.1 Organoleptic Analyses .................................................................................41

3.4.2 Physico-Chemical Analyses..........................................................................43

3.4.3 Proximate Analyses .......................................................................................44

CHAPTER IV RESULTS AND DISCUSSIONS

4.1 Determination of Fat Type ..................................................................................50

4.1.1 Determination of Fat Type based on Organoleptic Analyses ...........50

ix
4.1.2 Physical Characteristics of Biscuits with Different Type of Fat......58
4.2 Composition Optimization of Wheat, Sorghum and Mungbean Flour ...60
  4.2.1 Determination of Optimum Biscuit Formula..........................61
  4.2.2 Optimization of Flours Composition ...................................81
  4.2.3 Verification of the Optimum Formula .................................81
  4.2.4 Determination of Nutritive Aspect of Optimum Biscuit...........82

CHAPTER V CONCLUSIONS AND SUGGESTIONS
  5.1 Conclusions..............................................................................85
  5.2 Suggestions..............................................................................86

BIBLIOGRAPHY .................................................................................87
APPENDICES .....................................................................................93
LIST OF FIGURES

Figure 2.1 Kernel of sorghum ................................................................................20

LIST OF APPENDICES

Appendix A. Preparation of sorghum flour and mungbean flour ....................... A - 1
Appendix B. Sensory form for preliminary research ........................................ B - 1
Appendix C. Sensory form for main research................................................... C - 1
Appendix D. Sensory form for verification test................................................ D - 1
Appendix E. Results of hedonic test in determination of fat type ...................... E - 1
Appendix F. Statistical analyses for hedonic test
  in determination of fat type ................................................................. F - 1
Appendix G. Result of scoring test in determination of fat type ...................... G - 1
Appendix H. Statistical analyses for scoring test
  in determination of fat type ................................................................. H - 1
Appendix I. Results of physical analyses in determination of fat type .............. I - 1
Appendix J. Statistical analyses for physical analyses
  in determination of fat type ................................................................. J - 1
Appendix K. Results of scoring test in determination of optimum formula ....... K - 1
Appendix L. Results of hedonic test in determination of optimum formula ...... L - 1
Appendix M. Results of physico-chemical analyses
  of determination of optimum formula .................................................. M - 1
Appendix N. ANOVA Result of Intensity of Color
  in the Optimization using Design Expert 7.0® ....................................... N - 1
Appendix O. ANOVA Result of Intensity of Off Odor
  in the Optimization using Design Expert 7.0® ....................................... O - 1
Appendix P. ANOVA Result of Intensity of Off Taste
  in the Optimization using Design Expert 7.0® ....................................... P - 1
Appendix Q. ANOVA Result of Score of Mouthfeel
  in the Optimization using Design Expert 7.0® ....................................... Q - 1
Appendix R. ANOVA Result of Intensity of Hardness
  in the Optimization using Design Expert 7.0® ....................................... R - 1
Appendix S. ANOVA Result of Color Acceptance
   in the Optimization using Design Expert 7.0® .................S - 1
Appendix T. ANOVA Result of Aroma Acceptance
   in the Optimization using Design Expert 7.0® .................T - 1
Appendix U. ANOVA Result of Mouthfeel Acceptance
   in the Optimization using Design Expert 7.0® .................U - 1
Appendix V. ANOVA Result of Taste Acceptance
   in the Optimization using Design Expert 7.0® .................V - 1
Appendix W. ANOVA Result of Hardness Acceptance
   in the Optimization using Design Expert 7.0® .................W - 1
Appendix X. ANOVA Result of Overall Acceptance
   in the Optimization using Design Expert 7.0® .................X - 1
Appendix Y. ANOVA Result of Value of Hardness
   in the Optimization using Design Expert 7.0® .................Y - 1
Appendix Z. ANOVA Result of Value of Fracturability
   in the Optimization using Design Expert 7.0® .................Z - 1
Appendix AA. ANOVA Result of Lightness
   in the Optimization using Design Expert 7.0® .................AA - 1
Appendix AB. ANOVA Result of Degree of Hue
   in the Optimization using Design Expert 7.0® .................AB - 1
Appendix AC. ANOVA Result of Spread Ratio
   in the Optimization using Design Expert 7.0® .................AC - 1
Appendix AD. ANOVA Result of Moisture Content
   in the Optimization using Design Expert 7.0® .................AD - 1
Appendix AE. Results of analyses in verification of optimum formula
Appendix AF. Result of dietary fiber analysis for control biscuit
Appendix AG. Result of dietary fiber analysis for optimum biscuit
Appendix AH. Results of dietary fiber analyses
   by PT. Saraswanti Indo Genetech
Appendix AI. Results of proximate analyses
Appendix AJ. Results of T-test for proximate analyses
