ACKNOWLEDGEMENTS

Greatest gratitude to God for His love, blessings, and guidance to the writer so that the writer can finish the thesis with the title of “STUDY ON THE UTILIZATION OF OKARA COMBINED WITH WHITE OYSTER MUSHROOM (*Pleurotus ostreatus*) ON MEAT-FREE NUGGET MAKING” as one of the academic requirements to obtain a degree of *Sarjana Teknologi Pertanian Strata Satu* in Food Technology Department, Faculty of Science and Technology, Universitas Pelita Harapan.

The writer also realizes that the thesis would not be completed without the assistance, prayer, supports, and guidance from many parties. Therefore, writer is willing to express a sincere gratitude to:

1. Dr. Ir. Raffi Paramawati, MSi as the thesis supervisor, for her time, care, guidance, support, and suggestions during the thesis research process until the report was completed.
2. Mrs. Sisi Patricia L. A. Gultom, MEng as the thesis co-supervisor and the Vice Head of Food Technology Department in Universitas Pelita Harapan, for her time, care, guidance, support, and suggestions during the thesis research process until the report was completed.
3. Ms. Julia Ratna Wijaya MAppSc, as the head of Food Technology Department in Universitas Pelita Harapan for the opportunity to complete this thesis given to the writer.
4. Writer’s family members, father (Heryanto Widjaja), mother (Lelianingsih), sister (Tya Riana), and brother (Adrian Ryanto) for the endless support, prayer, care, and affection during thesis research process and the completion of thesis report.

5. Ms. Natania, Mr. Jeremia Manuel Halim, Ms. Ratna Handayani, Mrs. Melanie, and Mr. Adolf Parhusip as the head laboratories for allowing the writer to use the laboratories.

6. Mr. Adjie, Mr. Hendra, Ms. Merry, Ms. Rachel, and Mr. Darius as laboratory assistants for the time, help, and support during the research process.

7. Felincia Kurniawan, Iwa, Chiara Wijaya, Veliana Lim, Felicia Putri, Christiana, and all C’10 class members for the help and togetherness during the research and the completion of thesis report.

8. All people and relatives who are not mentioned yet but have given contribution to the writer during research and completion thesis report.

Writer realizes that this report is far from perfect and would like to apologize for any mistakes presence. Writer appreciates suggestions and criticism upon this report and hopes that this report will give useful information for readers and further development in Food Technology.

Karawaci, August 2014

ABSTRACT .................................................................................................. v
ACKNOWLEDGEMENTS ......................................................................... vi
TABLE OF CONTENTS ........................................................................ v
i
LIST OF TABLES .................................................................................. x
LIST OF FIGURES ................................................................................ xii
LIST OF APPENDICES .......................................................................... xiv

CHAPTER I INTRODUCTION
1.1 Background ..................................................................................... 1
1.2 Research Problem ............................................................................. 3
1.3 Objectives ....................................................................................... 3
   1.3.1 General Objective ................................................................. 3
   1.3.2 Specific Objectives ............................................................... 3

CHAPTER II LITERATURE REVIEW
2.1 Vegetarian Food ............................................................................... 5
2.2 Nugget ............................................................................................ 5
   2.2.1 Ingredients for Making Nugget ............................................. 7
   2.2.2 Nugget Processing ................................................................. 9
2.3 Okara ............................................................................................. 9
   2.3.1 Nutrient Content of Okara .................................................. 11
   2.3.2 Anti-Nutrient Content of Okara ........................................... 12
   2.3.3 Research on Okara Utilization ............................................. 12
2.4 White Oyster Mushroom (*Pleurotus ostreatus*) .......................... 13
   2.4.1 Nutrient Content of White Oyster Mushroom ....................... 14
2.4.2 Research on White Oyster Mushroom Utilization .................. 16
2.5 Dietary Fiber ................................................................................. 17
2.6 Hydrocolloid (Gums) ................................................................. 18
   2.6.1 Carrageenan ................................................................. 18
   2.6.2 Konjac Gum ................................................................. 19
   2.6.3 Carboxymethyl Cellulose (CMC) ........................................ 20

CHAPTER III RESEARCH METHODOLOGY
3.1 Materials and Equipments ......................................................... 22
3.2 Research Stages ........................................................................... 23
   3.2.1 Research Stage I ......................................................... 23
   3.2.2 Research Stage II ......................................................... 24
3.3 Experimental Design ................................................................. 26
   3.3.1 Research Stage I ......................................................... 26
   3.3.2 Research Stage II ......................................................... 28
3.4 Analysis Procedure ................................................................. 29
   3.4.1 Physical Analysis ......................................................... 29
   3.4.2 Chemical Analysis ......................................................... 31
   3.4.3 Sensory Evaluation ......................................................... 35

CHAPTER IV RESULTS AND DISCUSSIONS
4.1 Raw Ingredients ................................................................. 37
4.2 Effect of Different Ratio of Okara Flour and White Oyster Mushroom and
   Type of Hydrocolloid on Physical Parameters ....................... 38
   4.2.1 Texture ................................................................. 38
   4.2.2 Color ................................................................. 40
4.3 Effect of Different Ratio of Okara Flour and White Oyster Mushroom and
   Type of Hydrocolloid on Chemical Parameters ....................... 42
   4.3.1 Moisture Content ......................................................... 42
   4.3.2 Expressible Moisture ......................................................... 43
   4.3.3 Frying Loss ................................................................. 44
   4.3.4 Oil Absorption ................................................................. 46
4.4 Effect of Different Ratio of Okara Flour and White Oyster Mushroom and Type of Hydrocolloid on Sensory Evaluation .............................................. 47
  4.4.1 Color ................................................................................................ 47
  4.4.2 Aroma .............................................................................................. 49
  4.4.3 Texture of Compactness and Chewiness ......................................... 51
  4.4.4 Taste ................................................................................................ 55
  4.4.5 Overall Acceptance .......................................................................... 56
4.5 Determination of Most Preferred Ratio of Okara Flour and White
  Oyster Mushroom and Type of Hydrocolloid ............................................ 58
4.6 Effect of Different Concentration of Hydrocolloid on Physical Parameters... 58
  4.6.1 Texture ............................................................................................. 58
  4.6.2 Color ................................................................................................ 60
4.7 Effect of Different Concentration of Hydrocolloid on Chemical Parameters . 61
  4.7.1 Moisture Content ............................................................................. 61
  4.7.2 Expressible Moisture ....................................................................... 62
  4.7.3 Frying Loss ..................................................................................... 62
  4.7.4 Oil Absorption ................................................................................. 63
4.8 Effect of Different Concentration of Hydrocolloid on Sensory Evaluation .... 64
  4.8.1 Color ................................................................................................ 64
  4.8.2 Aroma .............................................................................................. 65
  4.8.3 Texture of Compactness and Chewiness ......................................... 66
  4.8.4 Taste ................................................................................................ 67
  4.8.5 Overall Acceptance .......................................................................... 68
4.9 Determination of Most Preferred Concentration of Hydrocolloid .............. 69
4.10 Nutritional Composition of Most Preferred Meat-Free Nugget ................... 69

CHAPTER V CONCLUSIONS AND SUGGESTIONS
5.1 Conclusions ........................................................................................... 72
5.2 Suggestions ............................................................................................ 72

BIBLIOGRAPHY ....................................................................................... 74
APPENDICES ............................................................................................. 82
LIST OF TABLES

Table 2.1 The crop area, productivity, and production of soybean in Indonesia from 2003-2013 ................................................................. 10

LIST OF APPENDICES

Appendix A. Flowchart of okara flour making (Modification of Siswadi, 2012) ................................................................. A-1
Appendix B. Taxonomical verification of Pleurotus ostreatus ................. B-1
Appendix C. Hedonic and scoring form of meat-free nugget for research stage 1 and 2 ............................................................. C-1
Appendix D. Objective measurements of the meat-free nugget for research stage 1 for physical parameters ............................ D-1
Appendix E. Objective measurements of the meat-free nugget for research stage 1 for chemical parameters ........................... E-1
Appendix F. Sensory evaluation of the meat-free nugget for research stage 1 ................................................................. F-1
Appendix G. Objective measurements of the meat-free nugget for research stage 2 for physical parameters ............................ G-1
Appendix H. Objective measurements of the meat-free nugget for research stage 2 for chemical parameters ........................... H-1
Appendix I. Sensory evaluation of the meat-free nugget for research stage 2 ................................................................. I-1
Appendix J. Proximate analysis of most preferred meat-free nugget ........ J-1
Appendix K. Dietary fiber and protein analysis result of the most preferred meat-free nugget ................................................... K-1
Appendix L. Proximate analysis of okara flour .............................................. L-1
Appendix M. Dietary fiber and protein analysis result okara flour ........... M-1
