ACKNOWLEDGEMENTS

Thank God for His blessing and guidance so that the writer could finished thesis entitled CHARACTERIZATION OF EDIBLE FILM FROM LESSER YAM STARCH-PLASTICIZER MIXED WITH SODIUM BENZOATE OR LEMONGRASS OIL AND APPLICATION AS EDIBLE COATING TO STRAWBERRY. This thesis was written as partial fulfillment of the academic requirements to obtain the degree of Sarjana Teknologi Pertanian Strata Satu, Faculty of Science and Technology, Universitas Pelita Harapan, Tangerang.

Writer realizes that this thesis cannot be finished without support of these people, therefore writer would like to express gratitude to:

1. Prof. Dr. Manlian Ronald A. Simanjuntak, ST., MT., D. Min as Dean of Faculty of Science and Technology, Universitas Pelita Harapan.

2. Ir. W. Donald R. Pokatong, MSc., Ph.D., Head of Food Technology Study Program, academic supervisor, and as thesis supervisor for providing time and useful advices during research, precise editing, and completion of the thesis.

3. Dr. Ir. Melanie Cornelia, MT., and Natania, M.Eng, Head of Food Processing laboratory, both as examiner, for useful input regarding thesis revision.

4. Dr. Tagor M. Siregar, Yuniwaty Halim, MSc., Dr. Adolf J.N. Parhusip, as Heads of Chemistry, Quality Control and Food Research, and Microbiology laboratories, respectively, for the permission to do research in the respective laboratory.
5. Hendra, Aji, Darius, Andra, Virly and Yosafat as the laboratory assistant for the help and support during the work in laboratory.

6. All lecturers and staffs of Food Technology Study Program for their support and help during the research.

7. Julia Ratna Wijaya, MAppSc as the former Head of Food Technology Study Program.

8. Darmawan Husada and Sri Markini Rawuh as writer’s beloved parents for never ending support and motivation during the research in laboratory.

9. Jessica Decyree and Sianny Priskilla as Gembili Girls for the never ending support, help, motivation, laughter, and jokes during the research.

10. Vanessa Christie for the support, motivation, reminder, jokes, and laughter during the research.

11. Christopher I. Rimba and Eric Hutama for being as “helper” during the research in laboratory

12. Callista Trixie, Gracia Liunita, Janice Patricia, Meilina Anastasia, Melita Mulyani, Nadya Larasati, and Novia Tanasal for always cheer the writer up and always support the writer to finish the thesis report.

13. Michael Lusli for lent the writer laptop to write the thesis report and become the mood booster for the writer and for the time spends to accompany the writer during the process of writing the thesis report.

14. All members of Food Technology 2013 C, for the memories in 3,5 years and for share the experienced thesis research together.

15. All friends and family who are not listed one by one but also contributed during the process of making the thesis report.
Writer realizes that this report is still far from perfection. Therefore, suggestions from readers will be gratefully accepted. Hopefully, this report could provide useful information for readers and other parties.

Tangerang, January 2017

## CHAPTER I INTRODUCTION

1.1 Background .................................................. 1
1.2 Research Problem ............................................ 3
1.3 Objectives .................................................. 4
   1.3.1 General Objectives .................................... 4
   1.3.2 Specific Objectives .................................. 4

## CHAPTER II LITERATURE REVIEW

2.1 Lesser Yam .................................................... 5
2.2 Edible Film .................................................. 6
   2.2.1 Starch ................................................... 8
   2.2.2 Plasticizer .............................................. 9
      2.2.2.1 Glycerol ........................................... 10
   2.2.3 Fatty Acid ............................................. 10
      2.2.3.1 Stearic Acid .................................... 11
   2.2.4 Antimicrobial Agent .................................. 11
      2.2.4.1 Lemongrass ....................................... 13
      2.2.4.2 Sodium Benzoate ................................ 13
CHAPERT III RESEARCH METHODOLOGY

3.1 Materials and Equipment ................................................................. 17
3.2 Research Procedures ........................................................................ 18
    3.2.1 Preliminary Research ................................................................. 18
    3.2.2 Research Stage I ....................................................................... 21
    3.2.3 Research Stage II ..................................................................... 22
3.3 Experimental Design ............................................................... 24
    3.3.1 Preliminary Research ................................................................. 24
    3.3.2 Research Stage I ..................................................................... 24
    3.3.3 Research Stage II ..................................................................... 26
3.4 Analysis Procedures ......................................................................... 28
    3.4.1 Chemical Analysis of Lesser Yam ........................................ 28
        3.4.1.1 Moisture Content with Oven Method ......................... 28
        3.4.1.2 Fat Content ..................................................................... 28
        3.4.1.3 Protein Content with Kjeldahl Method ...................... 29
        3.4.1.4 Ash Content ................................................................... 30
        3.4.1.5 Carbohydrate Content ...................................................... 30
    3.4.2 Analysis of Lesser Yam Starch ............................................ 30
        3.4.2.1 Starch Content ................................................................. 30
        3.4.2.2 Amylose Content ............................................................. 31
        3.4.2.3 Degree of Whiteness and Optical Properties ............ 32
    3.4.3 Edible Film Characteristics .................................................... 32
        3.4.3.1 Physical and Chemical Properties of Edible Film .......... 32
        3.4.3.2 Water Vapor Transmission ............................................. 33
    3.4.4 Coated Strawberry properties ............................................. 33
        3.4.4.1 Weight loss ....................................................................... 33
        3.4.4.2 Hardness ........................................................................... 33
        3.4.4.3 pH measured ................................................................... 33
        3.4.4.4 Sugar Content using Lane-Eynon Method .................. 34
CHAPTER IV RESULTS AND DISCUSSION

4.1 Verification and Chemical Analysis of Lesser Yam ............................................. 36
   4.1.1 Chemical Composition of Fresh Lesser Yam .................................................. 36

4.2 Characteristics of Lesser Yam Powder ................................................................. 37
   4.2.1 Analysis of Lesser Yam Powder ..................................................................... 37

4.3 Verification of Antimicrobial Activity ................................................................. 38

4.4 Characteristics of Edible Film ............................................................................. 39
   4.4.1 Tensile Strength of Edible Film ..................................................................... 39
      4.4.1.1 Sodium Benzoate-Added Edible Film ......................................................... 39
      4.4.1.2 Lemongrass Oil-Added Edible Film .......................................................... 41
   4.4.2 Elongation of Edible Film ............................................................................... 42
      4.4.2.1 Sodium Benzoate-Added Edible Film ......................................................... 42
      4.4.2.2 Lemongrass Oil-Added Edible Film .......................................................... 43
   4.4.3 Thickness ...................................................................................................... 44
      4.4.3.1 Sodium Benzoate-Added Edible Film ......................................................... 44
      4.4.3.2 Lemongrass Oil-Added Edible Film .......................................................... 46
   4.4.4 Water Vapor Transmission Rate ................................................................... 47
      4.4.4.1 Sodium Benzoate-Added Edible Film ......................................................... 47
      4.4.4.2 Lemongrass Oil-Added Edible Film .......................................................... 48
   4.4.5 Selected Edible Film ....................................................................................... 48

4.5 Characteristics of Coated Strawberry ................................................................. 50
   4.5.1 Weight Loss .................................................................................................. 50
      4.5.1.1 Room Temperature Storage ................................................................... 50
      4.5.1.2 Refrigeration Temperature Storage .......................................................... 51
   4.5.2 Hardness of Strawberry ............................................................................... 52
      4.5.2.1 Room Temperature Storage ................................................................... 52
      4.5.2.2 Refrigeration Temperature Storage .......................................................... 54
   4.5.3 pH of Strawberry ......................................................................................... 55
4.5.3.1 Room Temperature Storage .............................................................. 55
4.5.3.2 Refrigeration Temperature Storage .................................................. 56
4.5.4 Total Sugar .......................................................................................... 57
   4.5.4.1 Room Temperature Storage .......................................................... 57
   4.5.4.2 Refrigeration Temperature Storage ................................................. 58
4.5.5 Total Titratable Acidity ........................................................................ 60
   4.5.5.1 Room Temperature Storage .......................................................... 60
   4.5.5.2 Refrigeration Temperature Storage ................................................. 61
4.5.6 Total Plate Count .................................................................................. 62
   4.5.6.1 Room Temperature Storage .......................................................... 62
   4.5.6.2 Refrigeration Temperature Storage ................................................. 65
4.5.7 Shelf life of Strawberry ......................................................................... 67
4.5.8 Sensory Evaluation .............................................................................. 69
   4.5.8.1 Scoring Test ....................................................................................... 69
   4.5.8.2 Hedonic Test ..................................................................................... 70

CHAPTER V CONCLUSIONS AND SUGGESTIONS
   5.1 Conclusions .......................................................................................... 72
   5.2 Suggestions ........................................................................................... 72

BIBLIOGRAPHY ............................................................................................ 74
