ACKNOWLEDGEMENTS

Praise the Lord Jesus Christ for His guidance and blessing that had been given unto the writer during the research and process of writing the thesis report titled “THE STUDY OF PAPAYA (Carica papaya L.) LEAVES UTILIZATION IN EDIBLE SHEET MAKING” that is written as partial fulfillment of the academic requirement to obtain the degree of Sarjana Teknologi Pertanian Strata Satu of Food Technology Department, Faculty of Science and Technology at Universitas Pelita Harapan.

The thesis research and report would not be completed without the support, assistance, and guidance from others. Hence, the author would like to express the greatest gratitude to those who has given their supports and guidance, including:

1) Mrs. Sisi Patricia L. A. Gultom, M.Eng as thesis supervisor and head of microbiology laboratory, for the time, help, and guidance given during the research and process of writing this thesis report.

2) Ms. Julia Ratna Wijaya, MAppSc as the Head of Food Technology Department, Faculty of Science and Technology, Universitas Pelita Harapan, for the guidance and support throughout the thesis process.

3) Mrs. Natania, M.Eng, Ms. Yuniwaty Halim, MSc, Dr. Ir. Melanie Cornelia, MT, and Ms. Ratna Handayani, MP as head of laboratories, for the opportunity to conduct research in the laboratories.

4) All laboratory assistants for the help and time during research.
5) Ms. Julia Ratna Wijaya, MAppSc and Ms. Yuniwaty Halim, MSc as examiners for the input and suggestions given in the thesis report.

6) Beloved family including father (Budiman), mother (Jap Siu Guat), and brother (Martin Haryanto) for their support and prayer during the research and finishing this report.

7) Yolanda, Nadia Catherine Prima Onasie, Priscilla Destiana, Matheus Andra Gunawan, as companion in laboratories during research and for the time, support, and prayers during the completion of the report.

8) Angelita Bong, Yohanes Cahya, Jimmy Jaya Nugraha, Hong Fu Sheng, Bella Natasha, Yunita Ng, Chyntia Anggraini, Tiara Cahyadi, for the help and support during research and writing of the thesis report.

9) All friends from C class of Food Technology 2012 Universitas Pelita Harapan for the help and information during the completion of the thesis.

10) Angela Christiani, Priscilla Destiana, Paloma Yu, and Andreas Christopher for the support and prayer given during the completion of thesis.

11) Diana Laurentia, for the time, prayers, and support during the completion of research and report.

12) Giovina Lim, Louis Ekaputra, Herbert Ho, Kelvin Tio, Wira Sastra, Agnes Kurniawan, Ceavina Wu, and Alvin Novio for the support and prayer during the research and completion of the report.

13) Mr. Denny Tololiu, Mrs. Sherly Tololiu, Ms. Lenda Limpele, Violen Olivia, Marlyn Angeline, Viany Sarah, Kevin Yuvian, Justin Karel, Kevin Coner, Davit Puryanto, Chandra Erlangga and all member of GPdI Efata, for the prayers and support given.
14) All panelists that have participated in sensory evaluations.

15) All friends, lecturers, and relatives who are not yet mentioned but have supported the author during the completion of thesis research and report.

The author is aware that this report is not perfect and the author might have done some faults during the research and the completion of this report. The author would welcome any criticisms and suggestions given to this report with great pleasure. Finally, the author hopes that this report would be useful for the readers. Thank you.

Karawaci, February 2016

## CHAPTER I INTRODUCTION

1.1 Background ................................................................................................. 1

1.2 Research Problem ....................................................................................... 2

1.3 Objectives .................................................................................................... 3

1.3.1 General objective ................................................................................... 3

1.3.2 Specific Objectives ................................................................................ 3

## CHAPTER II LITERATURE REVIEW

2.1 Papaya .......................................................................................................... 4

2.2 Hydrocolloids ............................................................................................. 6

2.2.1 Carrageenan .......................................................................................... 7

2.2.2 Agar ........................................................................................................ 8

x
2.2.3 Alginates ................................................................. 9
2.3 Blanching ................................................................. 10
2.4 Nori Processing .......................................................... 11

CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment ............................................. 13
3.2 Research Method ........................................................ 13
  3.2.1 Preliminary Research .............................................. 15
  3.2.1.2 Reduction of Papaya Leaves Bitter Taste ................. 16
3.2.2 Main Research .......................................................... 16
  3.2.2.1 Determination of Best Product Formulation ............ 16
3.3 Experimental Design ...................................................... 17
  3.3.1 Experimental Design of Preliminary Research ............ 17
  3.3.2 Experimental Design of Main Research ....................... 18
  3.3.2.1 Effect of Binder Concentration on Each Type of Binder to the Physicochemical Characteristics of Papaya Leaves Edible Sheet ........ 18
  3.3.2.1 Effect of Binder Type to the Sensory Characteristics of Papaya Leaves Edible Sheet ................................................. 20
3.4 Methods of Analysis ....................................................... 21
  3.4.1 Sensory Analysis ..................................................... 21
    3.4.1.1 Scoring Test ................................................... 21
    3.4.1.2 Hedonic Test .................................................. 21
3.4.2 Physical Analysis ......................................................................................... 22

3.4.2.1 Tensile Strength ......................................................................................... 22

3.4.2.2 Thickness .................................................................................................. 22

3.4.2.3 Color (Sharif, et al., 2009) ...................................................................... 22

3.4.2.4 Water Activity (Riyanto, et al., 2014) ......................................................... 23

3.4.3 Chemical Analysis ......................................................................................... 23

3.4.3.1 Moisture Content (AOAC, 2005) ................................................................. 23

3.4.3.2 Ash Content (AOAC, 2005) ...................................................................... 23

3.4.3.3 Protein Content (AOAC, 2005) .................................................................. 24

3.4.3.4 Fat Content (AOAC, 2005) ....................................................................... 25

3.4.3.5 Carbohydrate Content (AOAC, 2005) ....................................................... 25

3.4.3.6 Total Dietary Fiber ................................................................................... 25

CHAPTER IV RESULTS AND DISCUSSION

4.1 Effect of Water Treatment and Salt Concentration in Bitter Taste Reduction of Papaya Leaves ........................................................................................................... 27

4.1.1 Sensory Test ................................................................................................. 27

4.2 Main Research ................................................................................................. 28

4.2.1 Effect of Binder Concentration on Each Type of Binder to the Physicochemical Characteristics of Papaya Leaves Edible Sheet ........................................ 29

4.2.1.1 Tensile Strength ....................................................................................... 29

4.2.1.2 Thickness .................................................................................................. 33
