ACKNOWLEDGEMENTS

Praise the Lord Jesus Christ for His guidance and wisdom throughout the thesis journey. This thesis entitled “Study of Heating Treatment and Fermentation Time On Antioxidant Activity of Chayote (Sechium edule (Jacq.) Swartz)-Based Fermented Beverage” is conducted as partial academic requirements to obtain the degree of Sarjana Teknologi Pangan Strata Satu from Universitas Pelita Harapan.

The thesis research and report would not be accomplished without the help from several individuals. Hence, the author would like to express gratitude as much as possible to:

1. Julia Ratna Wijaya, MAppSc as the Head of Food Technology Department as well as Thesis supervisor who has sincerely dedicated much of her time to guide and teach the author in relation to thesis related and non-thesis related matters.
2. Prof. Dr. L. Broto S. Kardono, Apt., as thesis co-supervisor who has provided guidance and support in any ways possible.
3. Sisi Patricia L.A. Gultom, M.Eng as the Deputy head of Food technology Department
5. Mr. Adzie, Mr. Hendra, Mrs. Meri, Mr. Yosafat, and Mr. Darius as laboratory technical assistants in Food Processing Laboratory, Quality Control Laboratory, Microbiology Laboratory, and Chemistry Laboratory respectively.
6. Family, for endless love, encouragement, and prayers throughout the thesis journey.

7. Ariel Siloam, for being such a motivation to the author, as well as for the guidance and help until the completion of thesis report.

8. Jessica, Vika Elika and Isabella Supardi, as friends under same supervision, for the jokes, ideas, laughters and worries shared until the completion of thesis report.

9. Livia Cornelia, Evelyn Glen, Rae Ninta Elisa, Sharon Angela, Nita Felicia, Evelyn Feliciana, Adeline Setiawan, Rehuellah Angela, and Alexandra Casie, for friendship and togetherness shared throughout university life.

10. All members of Food Technology Student Association or *Himpunan Mahasiswa Teknologi Pangan (HMTP)* 2013/2014.

11. All the members of C class of Food Technology 2011 Universitas Pelita Harapan and 2011 cohort.

12. All friends and relatives who cannot be mentioned one by one, but have contributed to the accomplishment of the thesis.

It is the desire of author that this report can be beneficial to the readers. Author would also like to apologize for any mistakes contained in this report, and welcome the readers to give any critics and suggestions to further improve this report.

LIST OF TABLES ........................................................................................ xiv

LIST OF FIGURES ........................................................................................ xv

LIST OF APPENDICES ................................................................................ xvii

## CHAPTER I INTRODUCTION

1.1 Background ............................................................................................... 1
1.2 Research Problem .................................................................................... 3
1.3 Objectives ................................................................................................ 4
   1.3.1 General Objective ........................................................................... 4
   1.3.2 Specific Objectives ......................................................................... 4

## CHAPTER II LITERATURE REVIEW

2.1 Chayote (*Sechium edule* (Jacq.) Swartz)) ............................................... 5
2.2 Fermentation ............................................................................................ 9
   2.2.1 Lactic Acid Fermentation .............................................................. 10
   2.2.2 Alcoholic Fermentation ................................................................. 12
2.3 Antioxidant .............................................................................................. 13
   2.3.1 Free Radical .................................................................................. 14
   2.3.2 Phenolic Compounds .................................................................... 15
   2.3.3 Flavonoid Compounds ................................................................. 16
CHAPTER III RESEARCH METHODOLOGY

3.1 Materials and Equipment ................................................................. 17
   3.1.1 Material ................................................................................ 17
   3.1.2 Equipment ........................................................................... 17

3.2 Research Stages ............................................................................ 18
   3.2.1 Preliminary Research ............................................................. 18
      3.2.1.1 The Procedure of Chayote-Based Fermented Beverage
               Preparation ................................................................. 18
      3.2.1.3 Experimental Design .................................................. 20
   3.2.2 Main Research ...................................................................... 21
      3.2.2.1 The Procedure of Chayote-Based Fermented Beverage
               Preparation ................................................................. 21
      3.2.2.3 Experimental Design .................................................. 22
   3.2.3 Methods of Analyses ............................................................. 24
      3.2.3.1 Organoleptic Analysis .................................................. 24
      3.2.3.2 Total Soluble Solid (AOAC, 2005) ................................. 25
      3.2.3.3 pH (AOAC, 2005) ....................................................... 25
      3.2.3.4 Alcohol Content (AOAC, 2005) .................................. 25
      3.2.3.5 Phenolic Content (Slinkard and Singleton, 1977) .......... 26
      3.2.3.6 Flavonoid Content (Ismail, et al., 2010) ....................... 26
      3.2.3.7 Antioxidant Activity – DPPH Radical Scavenging
               Assay (Gawron-Gzella et al., 2012) (with
               modification) .............................................................. 27

CHAPTER IV RESULTS AND DISCUSSION

4.1 Identification of Chayote .............................................................. 28

4.2 Results of Preliminary Research .................................................. 28
   4.2.1 Aroma .................................................................................. 28
   4.2.2 Taste .................................................................................... 29
   4.2.3 Overall .................................................................................. 31

4.3 Results of Main Research .............................................................. 32
   4.3.1 Total Soluble Solid ............................................................... 32
4.3.2 pH.......................................................................................................... 33
4.3.3 Alcohol Content.................................................................................... 35
4.3.4 Phenolic Content.................................................................................. 37
4.3.5 Flavonoid Content............................................................................... 40
4.3.6 Antioxidant Activity Analysis.............................................................. 43
4.3.7 Organoleptic Analysis........................................................................... 45
  4.3.7.1 Color................................................................................................ 45
  4.3.7.2 Aroma.............................................................................................. 48
  4.3.7.3 Taste................................................................................................ 49

CHAPTER V CONCLUSIONS AND SUGGESTIONS
5.1 Conclusions.............................................................................................. 53
5.2 Suggestions ............................................................................................. 54
