ACKNOWLEDGEMENTS

A greatest gratitude is given to Jesus Christ for His blessing and companion to this thesis entitled “EFFECT OF JACKFRUIT-SEED STARCH TO CANDELILLA WAX RATIO, AND PLASTICIZERS ON CHARACTERISTICS OF COMPOSITE EDIBLE FILM AND ITS UTILIZATION AS EDIBLE COATING TO STRAWBERRY” was completed. The author is fully aware that this report would not be complete without help support and guidance from many people, especially during the process of laboratory experiment and the completion of this report. Therefore, the writer would like to give highest appreciation to:

1. Prof. Dr. Manlian Ronald A.S., S.T., MT., D.Min., Dean of Faculty of Science and Technology for continuous support and guidance.

2. Ir. W. Donald R. Pokatong, M.Sc., Ph.D., Head of Study Program of Food Technology, and as Thesis Supervisor, for the time, patient, guidance and support during the research, precise editing and completion of the thesis.

3. Dr. Adolf J.N. Parhusip, Head of Microbiology Laboratory and Natania, M.Eng, Head of Food Processing Technology Laboratory, both as examiner for useful advices regarding thesis revision.

4. Nuri Anugrahami, MP as academic supervisor for the time, support and guidance during this study program.

5. Ratna Handayani, MP., Deputy Head of Study Program of Food Technology for continuous support and helpful guidance.
6. Dr. Tagor M. Siregar, Head of Chemistry Laboratory and Yuniwaty Halim, M.Sc., Head of Quality Control and Research Laboratories for giving the permission in doing the research in the respective laboratory.

7. Julia Ratna Wijaya, MAppSc as former Head of Study Program of Food Technology.

8. Sisi Patricia L.A Gultom, M.Eng as a former Deputy Head of Study Program of Food Technology.

9. Aji, Hendra, Yosafat, Andra and Virly, for the enormous help at the laboratories.

10. All lecturers of Study Program of Food Technology who teach the author during studying at Universitas Pelita Harapan.

11. My beloved family for the endless support, understanding and prayers during this up and down situation of research.

12. Team “Nangka”- Janice Patricia and Nadya Larasati for the support, teamwork, togetherness, randomness and happiness during the research.

13. Team Sir Donald including “Team Grains” and “Team Gembili” for the togetherness, endless support and help during research.

15. Angelita Bong and Lulu Luzuarti as fully understanding seniors who have always patiently answered, guided and given advices even to random questions during this research.
16. Januarius Armando, Alfonsus, Karina Unidjaja, Jessica Christina, Laurencia Wiranata, Nadia Theodora, Janet Reiyanti, Margaret Lili, Vibi Priscilla, Bella Louisa, Claudia Severesia, Christopher Imansantoso, Stella Beatrix, S.TP. who always cheers the author during up and down situation

17. All Batch one friends for support, help, tolerance and togetherness for this up and down moments of research.

18. All members of Class C, Food Technology for the informative sharing and discussions shared together.

19. All family, friends and colleagues who cannot be mentioned one by one and contribute to the completion of the thesis report.

The author realize that this report is far from excellence and has room to be improved, therefore any suggestions are very welcomed. Last but not least, the author hopes this report can be useful and informative for the readers.

Tangerang, January 2017

LIST OF TABLES .......................................................... xiii
LIST OF FIGURES ......................................................... xiv
LIST OF APPENDICES ................................................... xvi

CHAPTER I  INTRODUCTION
1.1 Background ................................................................ 1
1.2 Research Problem ...................................................... 3
1.3 Objective .................................................................... 3
1.3.1 General Objectives ................................................... 3
1.3.2 Specific Objectives ................................................... 4

CHAPTER II LITERATURE REVIEW
2.1 Jackfruit ..................................................................... 5
2.1.1 Jackfruit Seed .......................................................... 6
2.1.1.1 Jackfruit Seed Starch ............................................ 7
2.2 Candelilla Wax ............................................................ 8
2.3 Edible Packaging ........................................................ 9
2.3.1 Composite Edible Coating ........................................ 12
2.3.2 Other Additives ....................................................... 14
2.3.2.1 Plasticizer .......................................................... 14
2.3.2.2 Lecithin ............................................................. 18
2.4 Strawberry ..............................................................................................................19
2.4.1 Strawberry Edible Coating ...............................................................................21

CHAPTER III RESEARCH METHODOLOGY

3.1. Materials and Equipment ....................................................................................23
3.2. Research Stage .....................................................................................................24
  3.2.1 Preliminary Stages ...........................................................................................24
    3.2.1.1 Jackfruit Seed Starch Isolation .................................................................24
  3.2.1.2 Determination of Ratio of Edible Film Materials .......................................26
  3.2.2 Main Research ..................................................................................................28
    3.2.2.1 Stage I .........................................................................................................28
    3.2.2.2 Stage II .........................................................................................................28
3.3 Analysis ..................................................................................................................30
  3.3.1 Jackfruit Seed Starch Chemical Analysis ......................................................30
    3.3.1.1 Moisture Content .......................................................................................30
    3.3.1.2 Ash Content ...............................................................................................30
    3.3.1.3 Protein Content ........................................................................................31
    3.3.1.4 Fat Content ...............................................................................................31
    3.3.1.5 Carbohydrate ............................................................................................32
    3.3.1.6 Degree of Whiteness ................................................................................32
    3.3.1.7 Starch Content ..........................................................................................32
    3.3.1.8 Amylose Content ......................................................................................33
  3.3.2 Edible Film Characteristics .............................................................................34
    3.3.2.1 Visual Inspections of Edible Film Appearance .........................................34
    3.3.2.2 Tensile Strength and Elongation .................................................................34
    3.3.2.3 Water Vapor Transmission Rate ...............................................................34
    3.3.2.4 Thickness ...................................................................................................35
  3.3.3 Strawberry Properties ....................................................................................35
    3.3.3.1 Hardness .....................................................................................................35
    3.3.3.2 Weight Loss ...............................................................................................35
    3.3.3.3 pH ...............................................................................................................35
    3.3.3.4 Total Sugar Lane-Eynon ..........................................................................35
    3.3.3.5 Total Titratable Acid .................................................................................36
    3.3.3.6 Total Plate Count ......................................................................................36
3.3.3.7 Hedonic test ...............................................................36
3.3.3.8 Scoring Test .............................................................37
3.4 Experimental Design .......................................................37
  3.4.1 Preliminary Stage ......................................................37
    3.4.1.1 Jackfruit Seed Starch Isolation .................................37
    3.4.1.2 Determination of Edible Film Materials .......................37
  3.4.2 Main Research ...........................................................38
    3.4.2.1 Stage I .............................................................38
    3.4.2.2 Stage II ...........................................................40

CHAPTER IV RESULTS AND DISCUSSION
  4.1 Taxonomical Verification and Chemical Composition of
       Jackfruit Seed ...........................................................43
  4.2 Jackfruit Seed Starch Properties .....................................44
    4.2.1 Yield of Starch ....................................................44
    4.2.2 Starch, Amylose and Amylopectin Contents from Jackfruit
           Seed Starch .........................................................44
    4.2.3 Whiteness Index (WI) ...............................................45
  4.3 Determination of Ratio of Composite Edible Film Materials ..........45
    4.3.1 Tensile Strength ..................................................46
    4.3.2 Elongation ..........................................................47
  4.4 Edible Film Characteristics ............................................48
    4.4.1 Edible Film Appearance ...........................................48
    4.4.2 Tensile Strength ..................................................50
      4.4.2.1 Edible Film with Glycerol as Plasticizer ...............50
      4.4.2.2 Edible Film with Sorbitol as Plasticizer ..................51
    4.4.3 Elongation ........................................................53
      4.4.3.1 Edible Film with Glycerol as Plasticizer ...............53
      4.4.3.2 Edible Film with Sorbitol as Plasticizer ..................54
    4.4.4 Water Vapor Transmission Rate ..................................56
      4.4.4.1 Edible Film with Glycerol as Plasticizer ...............56
      4.4.4.2 Edible Film as Sorbitol as Plasticizer ....................57
    4.4.5 Thickness ..........................................................60
      4.4.5.1 Edible Film with Glycerol as Plasticizer ...............60
4.4.5.2 Edible Film with Sorbitol as Plasticizer.................................62
4.4.6 Selection of Film Formulation for Coating Application...............63
4.5 Coated Strawberry........................................................................64
  4.5.1 Weight Loss ...........................................................................64
  4.5.2 pH Analysis.............................................................................67
    4.5.2.1 Room Temperature Storage............................................67
    4.5.2.2 Refrigeration Storage.........................................................69
  4.5.3 Total Titratable Acidity..............................................................70
    4.5.3.1 Room Temperature Storage............................................70
  4.5.4 Hardness.................................................................................73
    4.5.4.1 Room Temperature Storage............................................73
    4.5.4.2 Refrigeration Storage.........................................................75
  4.5.5 Total Sugar..............................................................................76
    4.5.5.1 Room Temperature Storage............................................76
    4.5.5.2 Refrigeration Storage.........................................................78
  4.5.6 Microbial Plate Count...............................................................79
    4.5.6.1 Room temperature Storage..............................................79
    4.5.6.2 Refrigeration Temperature Storage...................................82
  4.5.7 Shelf Life...............................................................................84
    4.5.7.1 Room Temperature Storage............................................84
    4.5.7.2 Refrigeration Storage.........................................................86
  4.5.8 Scoring and Hedonic Test of Coated Strawberry at
    Initial Storage Time ..................................................................87

CHAPTER V CONCLUSIONS AND SUGGESTIONS
  5.1 Conclusions.............................................................................90
  5.2 Suggestions..............................................................................91
