ACKNOWLEDGEMENTS

The writer would like to express the deepest gratitude to God Trinity for all His blessings and guidance during the preparation, research, and completion of the thesis. This thesis was written as one of requirements to obtain the degree in Sarjana Strata Satu Teknologi Pertanian. The thesis is entitled “EFFECT OF FERMENTATION TIME AND COOKING PROCESS TOWARDS THE ANTIOXIDANT ACTIVITY OF TEMPEH”. The thesis could not be completed without the supports of many people; therefore, the writer would also like to thank:

1. Julia Ratna Wijaya, MAppSc as the thesis supervisor and the Head of Food Technology Department, Universitas Pelita Harapan who has given her time, efforts, and patience to guide, help, and support the writer during the whole process of this thesis.

2. Prof. Dr. L. Broto S. Kardono, Apt. as the thesis co-supervisor for the guidance and support during the whole process of this thesis.

3. My parents, Tomas and Ong Lie Jong, and my sister, Karin Florencia, for the endless prayers and supports to the author.

4. Sisi Patricia L.A. Gultom, M.Eng as deputy head of Food Technology Department, Universitas Pelita Harapan for the support and advice for the writer.

5. Natania, M.Eng, Ratna Handayani, MP, Dr. Ir. Melanie Cornelia, MT, Jeremia Manuel Halim, MP, and Dr. Ir. Adolf JN. Parhusip, Msi. as Head of Food Processing, Research, Chemistry, Quality Control, and
Microbiology Laboratory who have given permissions to the writer to conduct the research in laboratories.

6. Mr. Adzie, Ms. Rachel, Mr. Darius, Mr. Hendra, Mrs. Meri, and Mr. Yosafat for the support and guidance in the laboratory during the research.

7. All lecturers that have taught and all staffs that have helped the writer during her study in Universitas Pelita Harapan.

8. Fellow friends including Vika Elika Satria, Isabella Supardi, Stella Maria Pebrijusna, and Ariel Siloam for their supports and accompaniments during the research and thesis completion.

10. Adeline Setiawan, Alexandra Casie, Elisabet Cahyani, Evelyn Feliciana, Evelyna Glen, Livia Cornelia, Nita Felicia, Rae Ninta Elisa, Rehuellah Angela, and Sharon Angela for their support and love during the writer’s study at Universitas Pelita Harapan.

11. All Batch 2011 of Food Technology students that cannot be mentioned one by one for the support and motivation.

12. Seniors of Food Technology students that have helped the writer by sharing experiences and informations regarding their thesis.

13. All other friends and relatives who are not yet mentioned but have also supported the writer.
The writer realizes that this thesis is still far from perfection. Therefore, all suggestions and critics are welcome. The writer would also want to apologize for any accidental mistakes and statements. Lastly, the writer hopes that this thesis will be useful for readers.

## CHAPTER I INTRODUCTION ................................................................. 1

1.1 Background ................................................................. 1
1.2 Research Problem ................................................................. 2
1.3 Objectives ................................................................. 3
1.3.1 General Objective ................................................................. 3
1.3.2 Specific Objectives ................................................................. 3

## CHAPTER II LITERATURE REVIEW .................................................... 5

2.1 Soybean (*Glycine max* (L.) Merr.) ................................................................. 5
2.2 Tempeh ................................................................. 7
2.2.1 Methods of Tempeh Production ................................................................. 8
2.2.1.1 Cleaning and soaking the beans ................................................................. 8
2.2.1.2 Dehulling and boiling ................................................................. 9
2.2.1.3 Draining, cooling, and inoculating ................................................................. 9
2.2.1.4 Incubating ................................................................. 10
2.2.2 Stages of Fermentation in Tempeh ................................................................. 11
2.2.3 Cooking Process of Tempeh ................................................................. 13
2.2.3.1 Frying ................................................................. 13
LIST OF FIGURES

Figure 2.1 Soybean (Glycine max (L.) Merr.) ......................................................... 6
Figure 2.2 Three phases of tempeh fermentation .................................................. 12
Figure 2.3 Chemical structure of soy aglycones .................................................. 15
Figure 2.4 Chemical structure of β-glucosides soybeans isoflavones ................... 15
Figure 2.5 Stages of oxidation ............................................................................. 17
Figure 3.1 Flowchart of tempeh making ............................................................. 21
Figure 3.2 Flowchart of extract preparation ....................................................... 22
Figure 4.1 Total Phenolic Content of Tempeh with different treatments ............. 28
Figure 4.2 Changes of Total Phenolic Content in Processed Tempeh against Unprocessed Tempeh .......................................................... 29
Figure 4.3 Total Flavonoid Content of Tempeh with different treatments ........... 31
Figure 4.4 Changes of Total Flavonoid Content in Processed Tempeh against Unprocessed Tempeh .......................................................... 32
Figure 4.5 Antioxidant activity of tempeh with different treatments ................. 34
Figure 4.6 Changes of Antioxidant Activity in Processed Tempeh against Unprocessed Tempeh .......................................................... 35
LIST OF TABLES

Table 2.1 Proximate composition of soybean seed ................................................. 6
Table 2.2 Quality requirement of soybean tempeh ................................................. 8
Table 3.1 Research Statistical Design ................................................................... 23
LIST OF APPENDICES

Appendix A. Result of Identification of Soybean (Glycine max (L.) Merr.)...... A-1
Appendix B. Picture of tempeh in different fermentation time ....................... B-1
Appendix C. Total Phenolic Content of Tempeh .............................................. C-1
Appendix D. Total Flavonoid Content of Tempeh .......................................... D-1
Appendix E. Antioxidant Activity of Tempeh ............................................... E-1
Appendix F. Ascorbic Acid Standard ............................................................... F-1
Appendix G. Gallic Acid Standard ................................................................. G-1
Appendix H. Quercetin Standard ................................................................. H-1
Appendix I. Moisture Content of Tempeh .................................................... I-1
