ACKNOWLEDGEMENTS

First of all, author would like to praise the Lord Jesus Christ for His eternal grace and blessing that is given to the writer to finish the research and also writing the thesis report entitled “STUDY OF GLUTEN-FREE COOKIES INCORPORATED WITH DIFFERENT SEED FLOURS AS DIETARY FIBER SOURCE”. The completion of this thesis report is one of the requirements in order to achieve bachelor degree in Sarjana Strata Satu Teknologi Pangan Universitas Pelita Harapan, Karawaci. This thesis report cannot be completed without all the assistance, guidance, prayers, and supports from many parties involved. Therefore, the author would like to express the gratitude for those who have given their supports, directly or indirectly. As follows:

1. Ir. W. Donald R. Pokatong, M.Sc., Ph.D. as the thesis supervisor for the time, patient, guidance, knowledge, advice, support, and motivation to author during research, thesis report writing and completion.

2. Ms. Julia Ratna Wijaya, MAppSc as thesis co-supervisor and Head of Food Technology Department for the guidance, support, knowledge, time, patient, and advice during the research and thesis report writing.

3. Ms. Sisi Patricia, M.Eng as Vice Head of Food Technology Department and Head of Microbiology Laboratory, Mr. Jeremia M. Halim, MP, Dr. Ir. Melanie Cornelia, MT, and Ms. Ratna Handayani, MP as Heads of Quality Control Chemistry, and Research Food Processing Laboratories, respectively.

4. Mr. Tagor M. Siregar, M.Si. and Ms. Natania, M.Eng acting as thesis examiners for their useful suggestions regarding thesis revisions.
5. All family members, Yulia Sutandi, Steven Liesar, and William Liesar for the never ending support and prayers during the thesis completion.

6. Mr. Aji, Mr. Hendra, Mrs. Meri, and Ms. Rachel as the laboratory assistants for the time, help, and support during the research in laboratories.

7. Adeline Pannadhika, Audrey Zhe, Rehuella Angela, Vallen Wijaya, and Hartono Tanambell for the support, help, and togetherness under guidance by the same main supervisor.

8. All the people who gave their time to helped the authors in cleaning, cutting, and washing of the fruit seeds and also the panellists that participated for the sensory evaluations.

9. Elizabeth Kurniadi, Vanessa Jasmine, Felicia Audrey, Maya Amelia, and Nasya Jessica for the togetherness, information, guidance, and support during the free time of thesis completion.

10. All C class member of Food Technology 2011 Universitas Pelita Harapan for the support during the thesis completion.

11. All friends, relatives, and lecturer that cannot be mentioned one by one for the support, information, guidance, and prayer during the completion of thesis.

Author realizes that this thesis report is far from perfect. Therefore, author would gladly welcome any suggestions in order to improve the thesis report. Finally, the author hopes that this thesis report will be beneficial for pertinent readers.

Tangerang, July 2015

STATEMENT OF THESIS AUTHENTICITY

APPROVAL BY THESIS SUPERVISORS

APPROVAL BY THESIS EXAMINATION COMMITTEE

ABSTRACT ................................................................. v

ACKNOWLEDGEMENTS .................................................. vi

TABLE OF CONTENTS ................................................... viii

LIST OF FIGURES .......................................................... xii

LIST OF TABLES ............................................................ xiv

LIST OF APPENDICES ..................................................... xv

## CHAPTER I INTRODUCTION

1.1 Background ................................................................................................... 1

1.2 Research Problem .......................................................................................... 3

1.3 Objectives ...................................................................................................... 4

  1.3.1 General Objective ................................................................................ 4

  1.3.2 Specific Objectives .............................................................................. 4

## CHAPTER II LITERATURE REVIEW

2.1 Cookie Overview ................................................................. 5

  2.1.1 Ingredient ................................................................. 5

    2.1.1.1 Flour ............................................................................. 5

    2.1.1.2 Fat ................................................................................ 6

    2.1.1.3 Sugar ............................................................................. 7

    2.1.1.4 Egg ................................................................................ 8

    2.1.1.5 Chemical Leavens ..................................................... 8

  2.1.2 Gluten-Free Cookies ........................................................................... 9

  2.1.3 Tapioca Flour ................................................................................. 9

  2.1.4 Cookies Processing ................................................................. 10
2.1.4.1 Mixing ....................................................................................... 10
2.1.4.2 Dough Handling ................................................................. 10
2.2 Seed Flour Sources ...................................................................................... 12
  2.2.1 Jackfruit ............................................................................................... 12
    2.2.1.1 Jackfruit Seed ............................................................................ 13
  2.2.2 Chempedak .......................................................................................... 14
    2.2.1.2 Chempedak Seed ................................................................. 16
  2.2.3 Durian ............................................................................................... 16
    2.2.1.3 Durian Seed ................................................................................ 18
2.3 Flour Processing .......................................................................................... 19
  2.3.1 Blanching ............................................................................................. 19
  2.3.2 Drying Process in Fruits ...................................................................... 20
2.4 Gelatinization .............................................................................................. 20
2.5 Dietary Fiber ................................................................................................ 21
2.6 Celiac Disease ............................................................................................. 23

CHAPTER II RESEARCH METHODOLOGY

3.1 Materials and Equipment ............................................................................. 24
3.2 Research Stages ........................................................................................... 24
  3.2.1 Research Stage I .................................................................................. 25
  3.2.2 Research Stage II ................................................................................. 25
    3.2.2.1 Cookie Preparation .................................................................... 27
3.3 Experimental Design ................................................................................... 29
  3.3.1 Research Stage I .................................................................................. 29
  3.3.2 Research Stage II ................................................................................. 31
3.4 Analytical Procedures .................................................................................. 33
  3.4.1 Proximate Analysis .............................................................................. 33
    3.4.1.1 Moisture Content ....................................................................... 33
    3.4.1.2 Protein Content .......................................................................... 34
    3.4.1.3 Fat Content ................................................................................ 34
    3.4.1.4 Ash Content ............................................................................... 35
    3.4.1.5 Carbohydrate Content ............................................................. 35
  3.4.2 Dietary Fiber Content .......................................................................... 36
CHAPTER IV RESULTS AND DISCUSSION

4.1 Taxonomical Evaluation, Seed Dietary Fiber Content, and Chemical Composition ................................................................. 39
4.2 Seed Flour Yield and Lightness ................................................................................................................................. 39
  4.2.1 Flour Yield (%) ........................................................................................................................................ 42
  4.2.2 Flour Lightness ........................................................................................................................................ 39
  4.2.3 Chemical Composition of the Best Seed Flours ......................................................................................... 44
4.2.4 Dietary Fiber Content of the Best Seed Flours ................................................................................................. 46
4.3 Effect of Seed to Tapioca Flour and Gelatinization State of Tapioca Flour to Cookie Characteristics ................................................. 46
  4.3.1 Amylograph Results ................................................................................................................................ 47
  4.3.2 Spread Ratio .............................................................................................................................................. 47
  4.3.3 Diameter Increase .................................................................................................................................. 50
  4.3.4 Cookie Yield (%) ...................................................................................................................................... 53
  4.3.5 Color ......................................................................................................................................................... 55
  4.3.6 Hardness .................................................................................................................................................. 58
  4.3.7 Moisture Content .................................................................................................................................... 61
  4.3.8 Panel Acceptance .................................................................................................................................... 63
    4.3.8.1 Aroma ............................................................................................................................................ 64
    4.3.8.2 Color ............................................................................................................................................ 74
    4.3.8.3 Taste ............................................................................................................................................. 71
    4.3.8.4 Texture ........................................................................................................................................... 75
    4.3.8.5 Overall .......................................................................................................................................... 79
4.3.9 Chemical Composition and Dietary Fiber Content of the Best Cookies .................................................................................. 82
LIST OF FIGURES

Figure 3.1 Flowchart of jackfruit, chempedak, and durian seed flour processing .......................................................... 26

Figure 3.2 Flowchart of gelatinized tapioca flour production .................................................. 28
