ACKNOWLEDGEMENTS

Praise the Lord Jesus Christ for His blessings that has been given unto the writer during preparation, research, and the completion of this thesis entitled “EFFECT OF DIFFERENT CARRIER AGENTS AND CORE TO COATING RATIO TOWARDS THE ENCAPSULATION OF SOURSOP LEAVES (Annona muricata Linn.) TEA EXTRACT”, in which without His Grace, this thesis may not be completed in time. Furthermore, the writer has gained valuable experience and knowledge while completing the thesis.

The writer realizes that the thesis could not be completed without all the assistance, guidance, prayers, and supports from many parties involved. Therefore, the writer would like to express gratitude to those who help and support, whether directly or indirectly, including:

1) Mr. Ir. A. Herry Cahyana, M. Sc, Ph.D, as the thesis supervisor, for the guidance and support during the process and completion of thesis report.

2) Mrs. Natania, M.Eng, as the thesis co-supervisor and Head of Food Processing Laboratory, for the guidance and support during the process and completion of thesis report.

3) Ms. Julia Ratna Wijaya, MAppSc as the Head of Food Technology Department, Faculty of Science and Technology, Universitas Pelita Harapan.

4) Mrs. Dr. Ir. Melanie Cornelia, MT; Ms. Ratna Handayani, MP; and Mrs. Sisi Patricia L. A. Gultom, M.Eng, and Mr. Jeremia Manuel Halim, MP as Head of Chemistry, Research, Biology Laboratory, and Quality Control Laboratory.
5) Mr. Darius, Mr. Yosafat, Mrs. Meri, Mr. Hendra, Ms. Rachel, and Mr. Fauzi, for the support and guidance in the laboratory during the research.

6) Beloved parents, brother and sister for the never ending support, help, and prayer.

7) Fellow friends under the same supervision: Edison Sutiono, Natanael Leon, Aditya Febrian, Fiona Luisa and Grace Giovanni, for supporting one another in completing this thesis.

8) Elizabeth Kurniadi for all the supports and prayer during the completion of this thesis.

9) Fellow classmates of C 2011, and all members of Food Technology 2011 Universitas Pelita Harapan for all the help and support given during thesis completion.

10) Every person who cannot be mentioned that had contributed to the completion of the thesis, either directly or indirectly.

The writer realizes that this report may be imperfect and that the writer might have done unexpected things during research and thesis completion. Therefore, the writer wants to apologize for any mistakes and unclear statements found in this thesis that the writer is not aware of. The writer would welcome any critics and suggestion upon this thesis. Furthermore, the writer sincerely hopes that this thesis may be useful for the readers.

Tangerang, August 2015

ABSTRACT .......................................................................................................... iv
ACKNOWLEDGEMENTS .................................................................................. vii
TABLE OF CONTENTS ................................................................................. viii
LIST OF FIGURES ............................................................................................ xii
LIST OF TABLES ............................................................................................. xiii
LIST OF APPENDICES .................................................................................. xiii
CHAPTER I INTRODUCTION
1.1 Background ................................................................................................... 1
1.2 Research Problem ......................................................................................... 2
1.3 Objectives ..................................................................................................... 2
  1.3.1 General Objective .................................................................................. 2
  1.3.2 Specific Objectives ............................................................................... 3
CHAPTER II LITERATURE REVIEW
2.1 Soursop Leaves (Annona muricata Linn.) ................................................ 4
2.2 Tea Processing Method ............................................................................... 6
  2.2.1 Manufacturing Process of Tea ............................................................... 6
    2.2.1.1 Black Tea ........................................................................................ 7
    2.2.1.2 Partially Fermented Tea ................................................................. 7
    2.2.1.3 Unfermented Tea ............................................................................ 9
2.3 Antioxidant ................................................................................................. 10
2.4 Encapsulation .............................................................................................. 11
CHAPTER III RESEARCH METHODOLOGY
3.1 Materials and Equipments ................................................................. 16
3.2 Research Procedures ..................................................................... 16
  3.2.1 Preparation of Soursop Leaves Tea Extract ............................ 17
  3.2.2 Encapsulation ........................................................................... 18
  3.2.3 Analyses Procedure ................................................................. 19
    3.2.3.1 Antioxidant Activity by DPPH Method ............................ 19
    3.2.3.2 Total Phenolic Content (TPC) ........................................... 20
    3.2.3.3 Encapsulation Efficiency ................................................. 21
    3.2.3.4 Moisture Content and Powder Recovery ....................... 21
    3.2.3.5 Particle Size .................................................................. 22
    3.2.3.6 Liquid Chromatography-Mass Spectrometry .................. 22
3.3 Experimental Design .................................................................... 22
  3.3.1 Encapsulation of the Soursop Leaves Tea Extract .................... 23

CHAPTER IV RESULTS AND DISCUSSION
4.1 Preparation of the Microcapsules ................................................... 25
4.2 Microencapsulation by Spray Drying ............................................. 26
  4.2.1 Moisture Content and Powder Recovery ............................... 26
  4.2.2 Total Phenolic Content and Encapsulation Efficiency .......... 28
  4.2.3 Antioxidant Activity ............................................................... 31
  4.2.4 Particle Size ........................................................................... 34
  4.2.5 Liquid Chromatography – Mass Spectrometry (LC – MS) ....... 36

CHAPTER V CONCLUSIONS AND SUGGESTIONS
5.1 Conclusions .................................................................................. 41
5.2 Suggestions .............................................................................................................. 41
