ACKNOWLEDGEMENT

Praise the Lord for His blessings to writer throughout the whole thesis period and only by His grace, the completion of this report is possible. Thesis with title of “UTILIZATION OF TEMPEH AND RED RICE IN READY-TO-DRINK FUNCTIONAL BEVERAGE” was written as a partial fulfillment of academic requirements to obtain the degree of Sarjana Teknologi Pertanian Strata Satu Universitas Pelita Harapan, Tangerang, Banten.

Writer realized that completion of this thesis and its report would be impossible without the help and support of many parties. Therefore, in this opportunity, writer would like to thank:

1. Julia R. Wijaya, MAppSc as thesis supervisor and Head of Food Technology Department who had supervised, encouraged, and supported writer through the whole process of this thesis with her patience and knowledge.

2. The late, Prof. Dr. L. Broto S. Kardono as thesis co-supervisor who had helped and supported writer through his enormous knowledge and had peacefully returned to Father in heaven before being able to sign this report.

3. Natania, M. Eng, Ratna Handayani, MP, Dr. Ir. Melanie Cornelia, MT, Jeremia Manuel Halim, MP, and Sisi Patricia L.A. Gultom, M. Eng as Head of Food Processing, Research, Chemistry, Quality Control, and Microbiology laboratory who had given the writer permission to conduct research in the laboratories.

4. Mr. Adzie, Mr. Hendra, Mr. Darius, Ms. Rachel, Mrs. Meri, and Mr. Yosafat for the guidance and support in the laboratories.
5. Livia Cornelia and Henry Gomulyo as friends under the same supervisor for the supports and companions during the whole thesis process.

6. Beloved father (Riskiat Tjokroarif) and mother (Susany) for their love, prayer, support and trust to writer. Also, brothers and sister (Vincent Jevon, Gilbert Justin, and Clarrisa Jocelyn) who keep on supporting and cheered writer during difficult time.

7. Rae Ninta Elisa, Nita Felicia, Evelyn Glen, Adeline Setiawan, Elisabet Cahyani, Vika Elika, Jessica, Rehuellah Angela, Sharon Angela Tanuseputro, Stella Maria, Alexandra Casie for friendship, jokes, laughter and togetherness.

8. Grace Liesar, Anastasia Stephanie, Alvin Kusuma, Edison Sutiono, Marvin Setiawan, Anthonius Hideyo for the help, support, laughter and companion.

9. Friends from batch 2011 of Food Technology students that cannot be mentioned one by one who had shared their experiences and knowledge.

10. All friends and relatives who are not yet mentioned but have also supported writer from the start of thesis until the completion of this report.

Writer realizes that this thesis is so far from perfection. Therefore, writer would welcome any critics and suggestion which could be useful in the future. Last but not least, writer would like to say thank you and hope that this report could be useful for those who read.

Tangerang, July 2015

Writer

**CHAPTER I INTRODUCTION**  
1.1 Background .............................................................. 1  
1.2 Research Problem ...................................................... 3  
1.3 Objectives ................................................................. 4  
   1.3.1 General Objectives .................................................. 4  
   1.3.2 Specific Objectives .................................................. 4  

**CHAPTER II LITERATURE REVIEW**  
2.1 Tempeh ...................................................................... 6  
   2.1.1 Process of Making Tempeh ....................................... 6  
   2.1.2 Effect of Fermentation on Tempeh ................................ 8  

2.1.3 Possible Health Benefit of Tempeh ............................................................. 9

2.2 Red Rice ........................................................................................................ 11
  2.2.1 Possible Health Benefit of Red Rice ..................................................... 11

2.3 Hydrocolloids ............................................................................................... 12

2.4 Antioxidant .................................................................................................... 14
  2.4.1 Antioxidant in Tempeh .................................................................... 14
  2.4.2 Antioxidant in Red Rice .................................................................. 15

CHAPTER III RESEARCH METHODS

3.1 Materials and Equipment ............................................................................. 17

3.2 Research Methodology ................................................................................ 18
  3.2.1 Research Stage I ............................................................................... 18
    3.2.1.1 Research Stage I Experimental Design .................................... 18
    3.2.1.2 Research Stage I Procedure .................................................... 20
  3.2.2 Research Stage II ............................................................................... 21
    3.2.2.1 Research Stage II Experimental Design .................................... 22
    3.2.2.2 Research Stage II Procedure .................................................... 23
  3.2.3 Method of Analysis ............................................................................. 25
    3.2.3.1 Moisture Content ................................................................. 25
    3.2.3.2 Ash Content ....................................................................... 25
    3.2.3.3 Protein Content .................................................................. 25
    3.2.3.4 Fat Content ......................................................................... 26
    3.2.3.5 Carbohydrate Content ......................................................... 27
    3.2.3.6 Total Dietary Fiber Content .................................................. 27
    3.2.3.7 Sample Preparation for Total Phenolic Content, Total Flavonoid Content, and Antioxidant Activity Assessment .... 28
3.2.3.8 Total Phenolic Content .............................................................. 29
3.2.3.9 Total Flavonoid Content ............................................................. 29
3.2.3.10 Antioxidant Activity – DPPH Radical Scavenging .................. 29
3.2.3.11 Stability ................................................................................... 30
3.2.3.12 Chromameter Color Analysis .................................................. 30
3.2.3.13 Viscosity .................................................................................. 30
3.2.3.14 Sensory Analysis ..................................................................... 31

CHAPTER IV RESULTS AND DISCUSSION
4.1 Research Stage I .................................................................................. 32
  4.1.1 Results of Sensory Analysis ............................................................ 33
    4.1.1.1 Color ..................................................................................... 33
    4.1.1.2 Aroma .................................................................................... 36
    4.1.1.3 Taste ..................................................................................... 39
    4.1.1.4 Mouthfeel .............................................................................. 42
    4.1.1.5 Viscosity .............................................................................. 46
    4.1.1.6 Overall Acceptance ................................................................. 48
    4.1.1.7 Research Stage I Conclusion .................................................. 49
4.2 Research Stage II ................................................................................... 50
  4.2.1 Result of Sensory Analysis .............................................................. 50
    4.2.1.1 Color ..................................................................................... 50
    4.2.1.2 Aroma and Taste ................................................................. 51
    4.2.1.3 Mouthfeel .............................................................................. 51
    4.2.1.4 Viscosity .............................................................................. 52
    4.2.1.5 Overall Acceptance ................................................................. 54
4.2.2 Stability .......................................................................................... 55
4.2.3 Result on Best Concentration of Xanthan Gum.................................57

4.2.4 Physical and Chemical Characteristic Comparison of Tempeh and Red Rice Beverage with Commercial Products ..............................57

4.2.5 The Result on Hedonic Test on Comparison of Tempeh and Red Rice Beverage with Commercial Products........................................59

4.2.6 Analysis of Nutritional Composition of Raw Materials and Best Formulation for Tempeh and Red Rice Beverage.................................60

4.2.7 Analysis of the Changes of Functional Properties (Total Phenolic Content, Total Flavonoid Content, and Antioxidant Activity-DPPH Radical Scavenging Assay) After Processes........................................62

CHAPTER V CONCLUSIONS AND SUGGESTION

5.1 Conclusion...............................................................................................70

5.2 Suggestion...................................................................................................71

LIST OF APPENDICES

Appendix A. Identification of red rice ............................................................... A-1
Appendix B. Research stage I sensory analysis ............................................... B-1
Appendix C. Research stage II sensory analysis ............................................. C-1
Appendix D. Result and statistical analysis on viscosity on various
  concentration of xanthan gum ............................................................... D-1
Appendix E. Stability of various xanthan gum concentrations ..................... E-1
Appendix F. Physical characteristic comparison between tempeh and red
  rice beverage with commercial products ................................................. F-1
Appendix G. Statistical analysis of hedonic test on comparison of tempeh
  and red rice beverage with commercial products ................................... G-1
Appendix H. Proximate analysis on tempeh, red rice grains, and tempeh and
  red rice beverage ............................................................................ H-1
Appendix I. Antioxidant analysis (phenolic, flavonoid, DPPH radical
  scavenging activity) ........................................................................... I-1
