

# ABSTRAK

'Modern' is the word which the writer is seeking through its essence in this entire script report. This word reflects the present, current, and recent time.

We are now living in a modern world where life is changing through times, our needs evolved with it. People changed, building changed, everything needs to change. We shouldn't forget our past, our memories. Instead, we should live on as life goes on.

So does Architecture. Architecture have moved beyond the realm of place with the advent of information technology. We are at the age where appropriate design and techniques of construction are available to us on demand. If we still glomming with the past memory, than the design itself will end with a Dead Architecture.

The writer as an apprenticed, through PT. Bias Tekno-Art Kreasindo is involved in different phases of design in three tremendous project. Each project has its own uniqueness and superiority. Hopefully, with these projects could reflect the uses of Modern Architecture as a conceptual design, and could reveal the Art of Modern Architecture to make a better and suitable place for all of us at the present and the future.

**Key words:** Architecture, modern, design.
