LAPORAN KERJA PRAKTEK

APARTEMEN PALAZZO

Apartment Palazzo designed in European architecture style has much more advantages than other similar projects in Indonesia. First of all, the location of Apartment Palazzo is in the centre of Kemayoran. Kemayoran is a very strategic place to live in, because Kemayoran has the best infrastructure especially the drainage system, so it is surely free of flood. Besides that Apartment Palazzo provides more than 30 facilities for the residences, for example amusement park, and the longest swimming pool in Indonesia.

Apartment Palazzo starts in April 2005 and finish soon in January 2007. This project has 2 structural parts, sub structure and upper structure. This report explains general information of the project, and upper structure construction processes details, but we are going to focus especially on the application of special formwork for flat slab known as table form.
