### **GAMBARAN SIKAP PERAWAT TENTANG PELAPORAN INSIDEN *MEDICATION ERROR* DI SILOAM HOSPITALS LABUAN BAJO**

(xiv+30 halaman;5 tabel;1 bagan;6 lampiran)

Pelaporan insiden *medication error* merupakan langkah awal dalam mengevaluasi insiden *medication error*. Pelaporan insiden berkaitan dengan sikap yang dimiliki perawat. Sikap memiliki empat tingkatan yaitu menerima, merespon, menghargai dan bertanggung jawab. Perawat dituntut agar bisa memiliki sikap positif tersebut. Tujuan penelitian ini adalah mengetahui gambaran sikap perawat tentang pelaporan insiden *medication error* di Siloam Hospitals Labuan Bajo (SHLB). Metode yang digunakan adalah deskriptif kuantitatif dengan teknik *total sampling* dengan jumlah 27 perawat yakni 18 perawat IPD (*In Patient Department*), 9 perawat ICU (*Intensive Care Unit*) dan NICU (*Neonate Intensive Care Unit*). Instrumen yang digunakan adalah kuesioner berupa 20 butir pernyataan positif yang telah uji validitas, reabilitas dan normalitas. Hasil penelitian adalah seimbang, respon positif (50%) dan respon negatif (50%). Empat tingkatan sikap seimbang pada aspek menerima (50%), aspek merespon, menghargai, bertanggung jawab berbeda. Aspek menghargai memiliki respon negatif sangat tinggi (65,38%) jika dibandingkan dengan aspek merespon (42,30%) dan bertanggung jawab (46,15%). Kesimpulan adalah 50% perawat di SHLB menunjukkan respon positif dalam melakukan pelaporan insiden *medication error*. Saran bagi peneliti selanjutnya untuk menunjukkan hasil dalam presentase *favorable* maupun *unfavorable*.

Kata Kunci : Sikap, Pelaporan Insiden, *Medication error*, Perawat
