FAKTOR-FAKTOR YANG MEMENGARUHI PERAWAT DALAM PELAKSANAAN STANDAR PROSEDUR OPERASIONAL RISIKO JATUH DI RUANGAN RAWAT INAP LANTAI LIMA RUMAH SAKIT SILOAM BALI

(VII, 47 halaman, 3 tabel, 1 bagan, 13 lampiran)

Perawat dalam memberikan asuhan keperawatan kepada pasien harus menerapkan keselamatan pasien. Rumah Sakit Siloam Bali merupakan salah satu rumah sakit swasta yang berkomitmen pada keselamatan pasien dan telah memiliki Standar Prosedur Operasional (SPO) penerapan *patient safety* risiko jatuh. **Tujuan** Mengidentifikasi faktor-faktor yang memengaruhi perawat dalam pelaksanaan standar prosedur operasional risiko jatuh di Rumah Sakit Siloam Bali ruangan rawat inap lantai lima. **Desain** penelitian yang digunakan dalam penelitian ini adalah kuantitatif deskriptif. **Populasi** seluruh perawat di ruangan rawat inap lantai lima Rumah Sakit Siloam Bali sebanyak 34 perawat. **Sampel** *Total sampling* sebanyak 34 perawat. Kuesioner yang digunakan adalah milik peneliti, yang disusun oleh peneliti sendiri berdasarkan teori. **Hasil** Penelitian dalam kategori faktor predisposisi, faktor pemungkin, faktor penguat, responden setuju bahwa indikator dalam faktor predisposisi menjadi faktor-faktor yang memengaruhi perawat dalam pelaksanaan standar prosedur operasional risiko jatuh di Rumah Sakit Siloam Bali ruangan rawat inap lantai lima. **Saran** peneliti selanjutnya perlu dilakukan penelitian *action research* atau *quasi experiment* sehingga dapat diketahui lebih mendalam dalam meneliti faktor-faktor yang memengaruhi perawat dalam pelaksanaan standar prosedur operasional risiko jatuh.

Kata Kunci: faktor-faktor risiko jatuh, standar prosedur operasional (SPO).

FACTORS AFFECTING NURSES IN THE IMPLEMENTATION OF STANDARDS OPERATIONAL PROCEDURES OF FALL RISK IN THE INPATIENT ROOM THE FIVE FLOORS SILOAM BALI HOSPITAL

(VII, 47 pages, 3 tables, 1 chart, 13 attachments)

The nurse in providing nursing care to the patient should apply patient safety. Siloam Hospital Bali is one of the private hospitals that is committed to patient safety and has had Standard Operating Procedures (SPO) application of risk drop patient safety. Identify factors affecting the nurses in the implementation of standard operating procedures of risk fall at Bali Siloam Hospital in the fifth floor of the inpatient ward. Descriptive quantitative research design. Populai all the nurses in the fifth floor of the Hospital Siloam Bali as many as 34 nurses. Total sampling samples were 34 nurses. The questionnaire used is the property of the researcher, which is compiled by the researchers themselves based on the theory. The results of the research in the categories of predisposing factors, enabling factors, reinforcement factors, the respondents agreed that the indicators in the predisposing factors become the factors influencing the nurses in the implementation of standard operating procedures of risk fell at the Hospital Siloam Bali inpatient room on the fifth floor. Researchers then need to do research research or quasi experiment research so that it can be known more deeply in examining the factors that affect the nurses in the implementation of standard operating procedures fall risk.

Keywords: *falling risk factors, standard operating procedures (SOP).*
