OVERVIEW KNOWLEDGE LEVEL COMMUNITY PREVENTION OF COVID-19 (3M) IN THE RT 005 RW 003 BINONG VILLAGE, TANGERANG REGENCY

(xii + 58 Pages, 1 Chart; 3 Table; 9 Attachment)

Background: *Coronavirus Disease 2019 (COVID-19) is a contagious disease caused by SARS-CoV-2. COVID-19 is a new type of disease that has not been previously identified in humans. The World Health Organization officially states that COVID-19 is a pandemic and is a world health problem. The incidence of COVID in Indonesia is increasing day by day, this is because the level of knowledge of the prevention of COVID-19 in the community is still lacking, the prevention in question is such as taking steps to wash hands properly, using masks correctly, and limiting distance physical or physical distancing correctly. The level of lack of knowledge in the community which can be the cause of the chain of transmission of COVID-19 is increasing day by day.* ***Research objectives:*** *To determine the level of public knowledge of prevention COVID-19 in sub-district Binong city Tangerang.* ***Research Methods:*** *This study uses quantitative research methods with descriptivel design. The sample in this study amounted to 67 respondents. The data analysis technique used in this research is univariate analysis. This research will be conducted on January-April 2020.* ***The result:*** *The overall results obtained from the research on the level of public knowledge regarding the prevention of COVID-19 (3M) in RT 005 RW 003 Binong, Tangerang Regency are good with result of the knowledge level of the know category as many as 87 people (90,6%), the level of knowledge in the understanding category of 62 people (64,6%), and the level of knowledge in the application categories as many as 60 people (62,5%).* ***Discussion:*** *People in RT 005 RW 003 Binong, Tangerang Regency have a good level of knowledge and application, so it is hoped that it can become one of the basic efforts to break the COVID-19 chain.*
