HUBUNGAN DIMENSI *ATTACHMENT* DAN *NEED FOR ACHIEVEMENT* PADA MAHASISWA PESERTA MAGANG PROGRAM KAMPUS MERDEKA

(xi + 68 halaman: 8 tabel; 10 lampiran)

Penelitian ini bertujuan untuk melihat hubungan antara dimensi *attachment* dengan *need for achievement (n-Ach)* pada mahasiswa peserta magang Kampus Merdeka. Penelitian ini menggunakan pendekatan kuantitatif dan bersifat korelasional. Partisipan merupakan mahasiswa peserta magang program Kampus Merdeka di wilayah Jabodetabek yang diperoleh menggunakan teknik *purposive sampling*. Instrumen penelitian yang digunakan adalah *Experiences in Close Relationship – Revised – General Short Form (ECR-R-GSF)* untuk mengukur *attachment* dan *Achievement Motivation Scale – Revised (AMS-R)* untuk mengukur *n-Ach*. Hasil penelitian menunjukkan bahwa terdapat hubungan yang positif dan signifikan antara *attachment-related anxiety* dengan *fear of failure* peserta magang program Kampus Merdeka, sedangkan tidak terdapat hubungan yang signifikan antara *attachment-related anxiety* dengan *hope of success*. Selanjutnya, tidak ditemukan hubungan yang signifikan antara *attachment-related avoidance* baik dengan *hope of success* maupun *fear of failure*. Adapun hasil temuan lain terkait dimensi *attachment* dan *n-Ach* turut dibahas dalam penelitian ini.

Kata kunci : *Attachment*; Kampus Merdeka; Mahasiswa Magang; *Need For Achievement*

THE RELATIONSHIP BETWEEN DIMENSIONAL ATTACHMENT AND NEED FOR ACHIEVEMENT OF STUDENTS PARTICIPATING IN THE KAMPUS MERDEKA INTERNSHIP

(xi + 68 pages: 8 tables; 10 attachments)

This study aims to see the relationship between the dimensional attachment and the need for achievement (n-Ach) of students participating in the Kampus Merdeka internship. This study uses a quantitative approach with a correlational research method. The participants of this study are students interns of Kampus Merdeka in Jabodetabek area, obtained using purposive sampling techniques. The instruments used were Experiences in Close Relationship – Revised – General Short Form (ECR-R-GSF) to measure attachment and Achievement Motivation Scale – Revised (AMS-R) to measure n-Ach. The results showed that there was a significant positive relationship between attachment-related anxiety and fear of failure of the Kampus Merdeka program interns, while there was no significant relationship between attachment-related anxiety and hope of success. Furthermore, no significant relationship was found between attachment-related avoidance with either hope of success nor fear of failure. Other findings related to attachment dimensions and n-Ach were also discussed in this study.

Keywords : Attachment; Kampus Merdeka; Need For Achievement; Student Interns
