Data is measured by validity and reliability test, and the sampling method that is utilized in this research is non-probability sampling, particularly snowball sampling. The data that has been obtained will be further analyzed using the SPSS 25.00 software, and the research model is being tested using normality, heteroscedasticity, multicollinearity, and linearity test. The data will also be tested with multiple linear regression and coefficient of determination test, and hypothesis tests are done with F-Test and T-Test.

This study aims to find out which among these variables; Application, Design, Device Price, Usability, and Function has the biggest influence on Customer Satisfaction and Customer Loyalty to Xiaomi Mi 10T Pro. The result of this study shows that Application, Device Price, Usability, and Function are having a significant influence on Customer Satisfaction of Xiaomi Mi 10T Pro partially and simultaneously.
