(xii + 90 pages; 3 figures; 26 table)

This study aims to examine the relationship between satisfaction and trust in the loyalty of Reload Byhp members. Respondents in this research were all Reload Byhp members who were registered until December 2021 with a total of 260 members. Respondent data was collected by distributing questionnaires that had been prepared on the Google form via the Whatsapp messaging application. The collected questionnaire data was then processed using the Partial Least Square Structural Equation Model (PLS SEM) approach with the SmartPLS 3.0 program. The results of this study indicate that all hypotheses are accepted. These results show that the services provided by Reload Byhp have an impact on member satisfaction and trust. Even though they are satisfied, Reload Byhp cannot be happy but is required to continue to innovate for services and programs to maintain the satisfaction of members who use Reload Byhp services.
