THE EFFECT OF FINANCIAL PERFORMANCE ON THE STOCK PRICE TO COAL MINING AND METAL & MINERAL MINING COMPANY IN INDONESIA'S STOCK EXCHANGE PERIOD 2017-2022

(xi + 54 pages; 2 figures; 13 tables):

This study aims to determine the effect of return on asset, debt to equity, company size, and current ratio on stock prices. The research method used in this research is descriptive and quantitative. The data used is secondary data. The population in this study are all coal mining and metal & mineral mining companies listed on the Indonesia Stock Exchange in the 2017-2022 period. Sampling uses a purposive sampling method, so that a sample of 26 companies is obtained with a total of 31 data observations. The data analysis method uses panel data analysis (fixed effect) and data testing is done using the E-views 10 program. The results showed that partial return on asset and company size had effect on stock prices, whereas debt to equity and current ratios had no effect on stock prices, Simultaneously return on asset, debt to equity, company size, and current ratio effect on stock prices.
