

## ACKNOWLEDGMENTS

First and foremost, I would like to extend my deepest thanks to our Lord, Jesus Christ that with all His everlasting grace and abundant wisdom which He gave to me, I have been able to finish my Final Assignment and my study for the Psychology bachelor degree. In His complete and perfect providence, He has covered me through storms and weaknesses. If any of you lacks wisdom, let him ask God, who gives to all liberally and without reproach, and it will be given to him (James 1:5). Thus, I believe that this Final Assignment is not the work of mine but God has authorized it above everything.

The Final Assignment with the title **“Problematic Internet Usage Differences between High-scored Emotional Intelligence and Low-scored Emotional Intelligence in University Students in Depok”** is addressed to fulfil a part of the academic requirements to achieve the Psychology Bachelor Degree of the Psychology Faculty in Universitas Pelita Harapan, Tangerang.

The researcher realized that without guidance, assistance, and prayer from various parties, this Final Assignment could not be accomplished accordingly. Therefore, the researcher would like to give the sincerest gratitude to all the parties that have contributed in the process of the Final Assignment, as the following:

1. Universitas Pelita Harapan and Yayasan Pelita Harapan for their great commitment in education and servanthship of Christ. I’m personally blessed to be able to enrolled in a campus that have given me an opportunity to finish my study through scholarship and helped my

I would like to give her half of my credits that without her witty knowledge in English Literature this thesis wouldn't come in comprehensive paragraphs.
