

ABSTRAK

The construction is build for the attending the human being physically and emotionally. The design witch has done with good analysis will product maximal and informative design. The Programming design process can be done through many methods, such as using the analysis activity. The approach is used at the Marga Bhakti Husada trauma Center Hospital project, because is easy to be used to transformation data.

The Programming design using the analysis activity helps architect to design construction type. Programming design process a estimate the competency an architect to get the maximal design.

“ The quality of analysis programming influence directly to quality of the product”
