The purpose of this study is to examine and analyze the impact of good corporate governance, stock return, financial performance, debt level, and earnings per share on firm value. The dependent variable in this study is firm value, which represents investors' assessment of a company's success level. The independent variables in this study are good corporate governance, stock return, financial performance, debt level, and earnings per share. The subjects of this study are companies listed in the LQ45 index on the Indonesia Stock Exchange (IDX) during the period of 2019-2023. The method used in this study is multiple linear regression. The results of this study show that good corporate governance and financial performance have a positive effect on firm value, while earnings per share have a negative effect on firm value. However, stock return and debt level do not influence firm value.

*Keywords*: firm value, good corporate governane, stock return, financial performance, debt level, dan earnings per share
