The purpose of this study is to analyze the influence of entrepreneurial alertness, entrepreneurial self-efficacy, entrepreneurial passion, proactive personality, and entrepreneurial intention on entrepreneurial behavior among university students. The population of this research consists of active students in the Greater Jakarta area (Jabodetabek) who are interested in entrepreneurship and intend to become entrepreneurs. This study employed a survey method using purposive sampling and distributed questionnaires to 385 respondents. Data analysis was conducted using a quantitative approach with the SEM-PLS (Structural Equation Modeling - Partial Least Squares) method. The results show that entrepreneurial alertness has a significant effect on entrepreneurial behavior; entrepreneurial passion, mediated by entrepreneurial intention, has a significant effect on entrepreneurial behavior; entrepreneurial self-efficacy also has a significant effect on entrepreneurial behavior but in a negative direction; proactive personality does not have a significant effect on entrepreneurial behavior; and entrepreneurial intention, moderated by proactive personality, has a significant effect on entrepreneurial behavior. These findings contribute to the development of entrepreneurship programs in higher education, particularly in fostering entrepreneurial behavior among students.
