(xv + 66 pages, 9 figures, 25 tables, 6 appendices)

Online transportation services such as Gojek and Grab are very important in Indonesia. Customer satisfaction is the key to success in this market. InDriver strives to improve customer satisfaction by improving brand image and trust. However, the number of InDriver customers in Medan decreased from 2019-2023 because they preferred other services. InDriver needs to improve its reputation and reliability, and focus on customer experience. Customers also doubt the honesty and ability of InDriver drivers. Improving customer image and trust is essential to compete.

Data collection was carried out by distributing questionnaires to respondents, namely customers who made purchases on InDriver transportation in 2024. The sample studied was 97 people. The data was processed using validity analysis, reliability, classical assumption test and multiple linear regression analysis.

The results of this study have met the validity, reliability, normality, multicollinearity and heteroscedasticity tests. Based on the hypothesis test, brand image, customer experience and trust have a significant effect on customer satisfaction, both partially and simultaneously. The magnitude of the determination coefficient is 84.9% and the remaining 15.1% can be explained by other variables such as promotion and service quality.

Recommendations for companies are that companies can consider innovation to improve brand image, create positive experiences through the best service and continue to pay attention to driver honesty in order to increase customer satisfaction.
